Forged Products:

PM Technoforge Forging & Engineering is a fast growing forging company in India with focus on meeting today's challenges for Forged products. PM Technoforge (India) LLP, came into existence in the year 2018. We are currently reckoned in the market as one of the leading Manufacturers of machinery components and automotive materials. Having in house installed capacity of 7500 TONS per annum with latest 2.5 Ton Belt Drop Hammer and 3.0 TON Pneumatic HUTA MPM Hammer. The products array includes Din Conical, Plate, Stainless Steel Flanges, Auto Parts, Crank Shaft, Gears, Borwell components, Gear Flange Coupling and many more. Our total and strict quality control measures right from the beginning of the production process till end has earned us the prestigious ISO-9001:2015 certification (certificate no. 85 100 001 19090) and PED certificate (certificate no. 01 202 IND/Q-19 0037).

DRIVEN BY POSSIBILITY™

YOU KNOW THE DRILL. SO DO WE.

//////
Gates innovative solutions can be found on virtually every part of a water well drilling rigs, and the equipment that supports operations. From top drives to mud pumps, and everything in-between, our team of industry experts and product engineers design, test, and manufacture Gates solutions that are trusted to power your most complex pumping and hydraulic equipment under the most demanding conditions.

G2XH XTREME™ HEAT HOSE

- Long life oil resistant tube
- 2 wire performing hose
- Abrasion resistant robust cover
- MSHA “2G” approved cover
- More flexible
- Pin pricked cover

Recommended for pressurized oil/air compressor delivery lines, specially designed for water well rig application.

Working Pressure: 1800 PSI (-24) & 1500 PSI (-32)

Temperature: -40°C to +149°C

DRIVEN BY POSSIBILITY™

G2XH XTREME™ HEAT HOSE

- Long life oil resistant tube
- 2 wire performing hose
- Abrasion resistant robust cover
- MSHA “2G” approved cover
- More flexible
- Pin pricked cover

Recommended for pressurized oil/air compressor delivery lines, specially designed for water well rig application.

Working Pressure: 1800 PSI (-24) & 1500 PSI (-32)

Temperature: -40°C to +149°C

MXT™ WIRE BRAID HOSE - SAE 100R16

More flexible with up to 40% lower force-to-bend for faster and more ergonomic installation.
Temperature Range: -40°C to +100°C

MEGASYS™ MXG™ 4K SAE 100R12

Lightweight, highly flexible, and qualified to ONE MILLION impulse cycles.
Temperature Range: -40°C to +121°C

MINE MASTER™ AIR DRILL HOSE

Recommended for Heavy duty, high pressure use on Industrial construction & pneumatic mining applications.
Temperature Range: -32°C to +82°C

AIR-WATER HOSE

For all air and water applications requiring maximum flexibility in engineering industry, workshops, shipyards, irrigation etc.
Temperature Range: -30°C to +82°C

FLEXMORE HOSE

For High pressure Hydraulic lines
Working pressure: 3600 PSI
Temperature Range: -40°C to +100°C

G1 1-WIRE BRAID HOSE - SAE 100R1

For Medium pressure hydraulic lines, Meets performance requirements of EN 853 1SN.
Temperature Range: -40°C to +100°C

G1 H HIGH TEMP 1- WIRE BRAID HOSE

For Medium pressure hydraulic oil lines, Meets or exceeds the performance requirements of SAE 100R1 Type AT
Temperature Range: -40°C to +135°C

4XH SPIRAL WIRE HOSE

For High pressure and high impulse applications. Most flexible EN 856 4SH hose in the industry.
Temperature Range: -40°C to +100°C

4XP SPIRAL WIRE HOSE

For Extremely high-pressure and high impulse hydraulic applications. Most flexible EN 856 4 SP hose in the industry.
Temperature Range: -40°C to +100°C

A new generation of submersible motor pumps

In early May 2021 the KSB Group launches the youngest generation of its time-tested submersible grey water pumps on the market: the AmaDrainer 3 type series. The new development of these pumps, available in four sizes, is the manufacturer's response to customer requests for a design that is more compact and easy to handle. Its compact design, integrated float switch, and a diameter of no more than 155 mm make the type series suitable for narrow spaces such as light wells, for example. The maximum head is 11.3 metres.

The submersible motor pumps are very robust and provide a high operating reliability. All four sizes are designed for continuous duty at a fluid temperature of up to 70 °C and briefly even up to 90 °C.

A novelty is the integrated low water level intake: By removing the suction strainer the two smaller pump sizes can achieve residual water levels as low as 2 mm. The larger pump sizes are characterised by free passages of up to 35 mm, so they can also transport coarse matter contained in the waste water. For aggressive water and other fluids handled a special variant is available for all sizes.

All pump sets feature a high-quality plastic casing. They are low in weight and highly corrosion-resistant. A jacket-cooled motor permits operation even when the motor is not submerged. In addition, AmaDrainer 3 comes with integrated motor protection. Fitted with a 10-metre power cable as standard, the pump set allows for more flexible handling.

The new submersible grey water pumps are versatile in use. They can be used for draining shafts and cellar rooms as well as for extracting water from reservoirs and rivers, for emergency drainage and other applications such as draining outside basement stairwells and underground passages. The pump sets are supplied ready to be plugged in, enabling fast installation and commissioning.

Duke Plasto Technique Private Limited

Company Profile

Pumping trust around the world – Duke Plasto Technique Private Limited

Duke Plasto Technique Private Limited is synonymous for manufacturing quality consistent and reliable Products, and "National Quality Award" in 2007 from government of India has proved it. Duke's diligent and visionary workforce is committed for the highest quality production under a roof with an ambition to make an empire at world level. By getting customer satisfaction and simultaneously providing them unique product which is highly inspected with latest technology. Pouring Out Solutions for a lifetime.

Vision & Mission

Our 'VISION' is "To be eminent global brand providing complete,

Innovative, Invincible quality pumping paraphernalia under one roof".

Our 'MISSION' is "We are committed to manufacture products complying with the best quality standards of the world".

"We strive to create an environment that nurtures youth and nourishes the experienced on the bedrock of Ethics. Duke is instituted by amalgamating the best practices and technologies of the world".

The 'VALUES' that guide us are "Trust, Ethics, Integrity, Discipline and Performance".

Awards

Our product 'Quality' itself is our milestone to introduce ourselves throughout India as well as abroad.

National Award for Quality Product 2006 for "uPVC - Pipes"

- Handed by Hon. Prime Minister

of India Shri Manmohan Shingh.

National Award - 2009 for "Outstanding Entrepreneurship"

- Handed by Minister of State MSME, (Govt. of Gujarat) Shri Dinesha Patel.

Empower Award - 2009 for "Highest Power Saving in Submersible Pump"

- Handed by Minister of State of Power, (Govt. of Gujarat) Shri Bharatsinh Solanki.

National Award - 2009 for "Outstanding SSI Entrepreneurship"

- Handed by Hon. Chief Minister of Gujarat Shri Narendra Modi.

State Shramveer Award - 2009 for Best Kaizen

- Handed by Minister of Labor & Employment, (Govt. of Gujarat) Shri Vajubhai Vala

National Quality Award - 2010 for "Submersible Pump" Product from Ministry of MSME, Govt. of India.

- Handed by Hon. President of India Smt. Pratibha Patil.

Our Strength

At Duke Plasto Technique, We strongly believe that winning is never a one-man show. It is always the team that wins.

Within Duke Plasto Technique, a professionally qualified & dedicated team of experts, at each level of hierarchy, performs in tandem to deliver results that amaze. From time to time, we also send our employees & technical staff to seminars, workshop & training institute to keep them upgraded with the latest know how.

NATIONAL ENERGY CONSERVATION AWARD 2022

C.R.I. HAS MADE HISTORY FOR THE 8TH TIME

Mr. G. SELVARAJ, JMD, C.R.I. Group and Ms. SAHITHYA SOUNDRAMAJAN, Director, C.R.I., USA, were presented with the NEC Award 2022 by the Hon'ble President of India, Smt. DROUPADI MURMU

- Over 2.1 million energy-efficient, star-rated pumpsets have been installed.
- 14,000 solar pumping systems and over 1,00,000 IoT-enabled smart pumpsets have been successfully commissioned.
- C.R.I. achieved a cumulative energy savings of 3,150 million units (kWh), thereby reducing 2.5 million tonnes of CO₂ emissions for our nation.
- Acquisitions in UK and Italy has catalysed C.R.I.'s global presence.
- Export Excellence Award 16 times • 9000+ products • Sold over 120 countries • 20000+ outlets.

We are extending our partnership with the Ghanaian Ministry of Sanitation and Water Resources to bring a long-lasting solution to the country's water supply challenges.

Grundfos delegation headed by Stéphane Simonetta, Group Executive Vice President and CEO of Industry, visited Ghana. The visit was a follow-up on a previous engagement in the country. In addition to meetings with partners, customers and other stakeholders, a renewal of a Memorandum of Understanding (MOU) between Grundfos and the Ghanaian Ministry of Sanitation and Water Resources was part of the agenda.

"I was glad to represent Grundfos and sign the renewal of our collaboration with the ministry, continuing our joined efforts to ensure clean and affordable water access to people in rural areas. We can be proud of what is being done by our colleagues and our company here in Ghana," said Stéphane Simonetta.

The MOU includes water service improvements and energy efficiency projects, as well as training, service and further collaboration on water and energy saving projects. The partnership was kicked off in 2020 and today, we are making a direct difference for more thousands of people in rural Ghana. We do this through our Ghana Water Initiative, which is part of Grundfos SafeWater (part of Water Utility), where we deliver water to two communities in partnership with local authorities.

"This collaboration is a good example of the type of public-private partnerships we need to bring water to more people. We in Grundfos remain committed to our target of providing water access to 300 million people worldwide, including 1 million in Ghana, who today do not have this. This aligns closely with our Purpose as well as with our commitment to the UN's Sustainable Development Goal 6, focusing on water and sanitation," Stéphane Simonetta added.

Grundfos has an office in Ghana, represented by Water Utility, whilst Industry works through a distributor. In addition, the Grundfos Foundation supports an installer training program at the national technical schools and the installations of community toilets.

During the visit in Ghana, Stéphane Simonetta and the delegation also got an opportunity to experience the difference we are making via our great colleagues from Eurowater. In Ghana, more than 20 water works are equipped with Eurowater solutions ensuring clean drinking water for people.

All About Submersible Pumps

decreases the pressure at the bottom of the shaft in which the submersible pump sits. The motor of an ESP system is also designed to function under high temperatures (up to 300 degrees Fahrenheit) and high pressures, so it is used in situations where very deep wells are common, such as oil wells. They can be relatively expensive to run because they require special electricity cables, although new developments have seen the introduction of coiled tubing umbilicals to supply energy to the deep motors. Additionally, electric usage is much higher than other submersible pump motors and the pump functions on tight tolerances that don't allow for solids and sand.

Electric Submersible Pumps (ESPs)

ESP Basics
Electrical submersible pumps (ESPs), much like vertical turbine pumps in design, are typically used to pump liquid. Essentially, an electric motor drives the pump, and the fluid's kinetic energy is increased. This energy is then partly converted into pressure, which lifts the fluid through the pump. ESPs are centrifugal pumps with vertical shafts, and as a result depend on basic rotating impellers to pressurize fluid. In an ESP, mechanical seals are used to

prevent fluid from flowing into the motor—the motor is coupled to the pump itself, and the entire unit is submerged in the fluid it pumps. Without mechanical seals protecting the enclosed unit, the motor could short circuit and fail.

In cases where more than one impeller is used, the pump is said to be multistage. Multistage centrifugal pumps may feature multiple impellers located on one shaft, or impellers on separate shafts. The result of connecting impellers in a series is higher pressure; connecting impellers parallel to one another results in increased output. Regardless, the fluid will still garner its energy from the electric motor that drives the impellers.

ESP Applications

ESPs are used in many different applications. Single-stage pumps can be used for basic drainage and pumping, as in many industrial applications, and can also handle slurry pumping. Multistage pumps are more often found in water removal applications, and can be used in water and oil wells. Regardless of the application, double-checking manufacturing specifications for a given ESP will help ensure its proper use.

ESPs and Oil Wells

Because ESPs can work with a variety of

flow rates and depths, they are well-suited to work inside oil wells. When used accurately, an ESP pump can decrease well pressure at the bottom, enabling the withdrawal of a higher amount of oil than otherwise could be extracted under normal pressure conditions. Pump diameter size ranges from 90 millimeters (mm) to 254 mm, and pumps can be one to 8.7 meters long. ESPs and Dewatering Gas Wells

Some gas reservoirs can produce a high amount of liquid, but because gas can damage ESPs, care must be taken when using an ESP to remove liquid from a gas well. However, ESP systems can be designed that enable the gas to flow freely up the pump's casing, while the pump efficiently removes fluid. The gas flow depends largely on casing head pressure—there are typically four methods with which ESPs can be used to dewater gas wells, but depending on the exact well situation all ESP set-ups should be sufficiently researched before a method is employed.

A submersible pump is a type of hermetically sealed pump device that operates by pushing, rather than pulling, water during its pumping process. It is able to function in this manner because, like the name suggests, the pump is fully submerged in the liquid to be pumped. This allows the pump to be lowered down into a deep hole for pumping needs without running into problems like pump cavitation, which can damage moving parts by developing vapor bubbles. Submersible pumps are used in a wide variety of industrial and commercial use applications.

Centrifugal Pump Basics

Centrifugal pumps feature rotating impellers, typically made from metal, which contain rotating vanes. These vanes transfer energy from the motor to the fluid they propel. As fluid enters the impeller, it accelerates as the impeller rotates. Eventually, the fluid exits the impeller's vanes at an increased speed, and the kinetic energy is typically converted into pressure.

Submersible Pump Design

Submersible pumps can feature a single stage or multiple stages. Each stage consists of a motor in a casing, closed with mechanical seals to prevent leakage. The motor is connected to a cable that generates power to run the motor, and the casing extends to some sort of pipe or hose leading to the surface. Submersible pumps can be connected to various types of pipes, flexible hoses or wires, depending on the job and the liquid being pumped.

The submersible pump casing can be composed of different kinds of metals, like chrome or stainless steel, or polymers. The most important aspect of the casing is that it is hermetically sealed. If any liquid were to leak into the casing, the motor could short out easily and pose high repair costs. Some casings are fitted with double mechanical seal construction for more strenuous jobs. The cable powering the motor is usually 50 feet in commercial use applications and can be much longer in larger scale industrial situations, such as oil wells. Many casings are also affixed with a float switch, which automatically activates the motor when the pump is fully submerged.

Submersible pumps come in various strengths, both in energy use and pumping speed. Most submersible pumps are rated as effective for a wide variety of liquids, but more viscous liquids at greater depths pose pressure problems that require stronger pumps for proper function. Additionally, some jobs can feature random bits of solid detritus and debris in the liquid, so it can be important to choose a submersible pump rated capable of handling solids. Generally, a submersible pump capable of handling solids will feature an agitator or a spray hole to mix solid particles into the liquid and make it easier for the machine to pump them out of the ground.

Submersible Pump Function

Many submersible pumps operate under the principle of Electric Submersible Pumping (ESP). This is achieved by lowering flowing pressure, which

ELGi Rig Compressors
with Superior Technology that delivers

BETTER PERFORMANCE
BETTER RELIABILITY
BETTER PROFITS

ELGi®
Always Better.

PG 575S-225

PG 1250

With customers trying to save time and increase productivity, inconsistent and extreme operating conditions make drilling a very demanding industry.

ELGi Rig Compressors are built to meet these demands and function in challenging situations and exceed all expectations by delivering superior performance, reliability and profits.

ELGi's Rig Compressors offer faster penetration, low fuel consumption, an exceptionally durable engine, and a compact and robust package.

Dear Customers

Thank you!

for your presence at the grand opening of our new branch office in Tiruchengode. It was an absolute pleasure to have you with us as we unveiled our latest facility and showcased our rig compressors. Your presence and support made the event truly special.

Thanks again for being integral to our journey and making the new branch office opening successful!

People who know plastics best

Total Piping Solution

Complete Piping Solutions for Borewell Applications

The Supreme Industries Ltd. is an acknowledged leader of India's plastic industry. It is credited with pioneering several path breaking products and has gained a valuable experience in providing innovative and cost effective piping solutions. The Company has been a trend setter and a torch bearer in the transition from conventional to advanced plastic piping products in the country. The Company's objective is to meet the growing needs of its clientele in water and waste management and in infrastructure sector through a specially designed high performance range of piping products. The innovative product portfolio offered by Supreme is extensive in nature and applications. With its range of over 7500 products, the most comprehensive in the piping industry, Supreme caters to almost every conceivable need and application in piping.

Jeevan bhar ka saath...

Benefits Of Installing Casewell Agriculture Pipes Need and importance of Casewell Agriculture Pipes

Agriculture is an important industry and it relies majorly on an optimal water supply to remain functional. High-quality agriculture pipe & fittings play a huge role in ensuring regular and healthy crop yield. Astral Pipes, India's leading agricultural water pipe manufacturer, offers a commendable range of agriculture pipes and respective fittings. The agriculture PVC water pipes help farmers source water from rivers and ponds to the farms. For added functionality, Astral also offers Casewell pipes that act as casing for borewell, providing extra protection.

Here, we take a look at the importance of installing Casewell agriculture pipes.

Casewell uPVC casing pipes are used as casing for bore-well which enhances durability and performance of the agriculture column pipes. These pipes help provide excellent protection even under the harshest of water conditions thus ensuring longevity of the system.

uPVC casewell pipes are tough and rigid while being extremely lightweight making it easier to distribute across large distances. Additionally, they are easy to work

with and install as they do not break or get damaged easily.

Astral Pipes' casing pipes are better than conventional pipes as they are lightweight, corrosion free and long lasting. These pipes do not alter the water quality. Astral Case-well pipes are easy to install as the threaded ends ensure that the pipes can be interlocked without the use of cements or adhesives.

Astral's stringent quality assurance approach across all stages of manufacturing gives the product a high degree of reliability making Astral Case-Well pipes a preferred choice for farmers across the country.

The production of all agricultural pipes by India's leading agricultural water pipe manufacturer, Astral Pipes, conforms to the highest industry standards and benchmarks for superior performance. These pipes are available in screen or slotted types and are used for casing in ground-water percolation to allow water to enter inside the well. These pipes can also be used to recharge the ground-water level through the rain-water harvesting pit.

**Commercial Hydraulics**

B37X Multipurpose Drill Rig

**Designed for
Geotechnical,
Environmental and
Exploration Drilling**

Mobile Drill calls the B37X a first class multipurpose drill rig ideal for the geotechnical, environmental and mineral exploration markets. With a 4-5/8-inch open center spindle, 13-foot stroke and various water pump options available, the compact B37X is a major partner for the safe and efficient use of drilling fluids. Pulldown 11,700 lbs. Pullback 15,700 pounds. Many other options available. Many popular mounts, including truck, trailer, tracks and skid. www.mobiledrill.net

Burgess EON Well Casing

**Company can
configure
casing specific
to well design**

Designed by well drillers for well drillers, Burgess "EON" Fiberglass well casing is designed specifically for water wells specializing in saltwater, high pH and hot mineral water. With sizes from 1½ to 16 inches, we will configure casing specific to your well design, such as stage wells with varying diameters from 10 to 16 inches. Burgess "EON" FRP pipe is NSF/ANSI 61 certified, corrosion resistant, inert throughout, non-conductive, low maintenance and cost effective. www.burgesswell.com

QED Environmental Systems AutoPump Ultra 4+ Pump

Designed for Aggressive Pump Jobs, from Mining to Remediation

Q.E.D. Environmental Systems offers its AutoPump Ultra 4+ Aggressive Fluid Duty pump with upgraded materials that extend service life and expand use cases. Stainless steel parts upgraded to 316-grade, dramatically improving corrosion resistance. Nonmetallic internal parts are polyvinylidene

difluoride (PVDF), a high-grade engineered plastic designed for elevated temperatures and broad chemical resistance. Rugged, resilient pump serves a range of applications, including for landfills, mining, DOD and DOE sites, remediation sites, and oil and gas. www.qedenv.com

GSSI UtilityScan

DF Utilities Locates

GSSI's UtilityScan DF ground penetrating radar systems are designed to help businesses save time and money. Two antennas, 300 MHz and 800 MHz, built into one system allow viewing of shallow and deep targets simultaneously in a single scan on the screen. Ideal for identifying buried utilities at multiple depths. Both metallic and non-metallic targets. Helps users avoid gas, communications and sewer lines, as well as underground storage tanks and PVC pipes in various soils.

SJE Rhombus

WellZone Pressure Controller

Company Says It Eliminates the "Traditional" Pressure Switch

SJE Rhombus offers the WellZone Pressure Controller, which it calls a longer-lasting option in pressure switches for single-phase 115/230 volt well pumps. WellZone eliminates the "traditional" pressure switch, a common failure point. Protects against rapid cycling, low pressure, run dry, overpressure, overcurrent and undercurrent. Provides pressure control for single-phase 2-wire submersible well pump applications. Uses 0-150 PSI pressure transducer to monitor discharge pressure and turns pump on and off according to set start and stop points. NEMA 4X enclosure. www.sjeinc.com

Submersible Pumps Market to Register US\$ 14.45 Bn worth Sales amid Surging Demand for Borewell Pumps

Future Market Insights' (FMI's) latest study offers comprehensive insights into the submersible pumps market. The study offers refined growth outlook for the forthcoming decade. It examines scope for the market's expansion across various segments on the basis of product type, head type, and application for the assessment period.

Future Market Insights (FMI), Dubai: As per an exhaustive analysis by FMI, the global submersible pumps market is poised to total US\$ 14.45 Bn by 2031 in comparison to the US\$ 8.42 Bn registered in 2020. Increasing demand for submersible pumps from construction, mining, and oil & gas industries is favoring the growth in the market. Driven by this, the market is expected to expand at a CAGR of 5.2% during the forecast period between 2021 and 2031. Water stress has emerged as one of the leading concerns across the world due to rapid urbanization and industrialization. Thus rising emphasis on wastewater treatment and demand

for new water sources, such as ground water reservoirs, to fulfill the domestic and industrial water needs is fueling the demand in the market. In response to this, the sales of submersible pumps are anticipated to register a year-over-year growth of 4.6% in 2021. Governments of emerging economies are increasingly adopting efforts to improve access to drinking water in rural and urban areas. According to the Department of Drinking water & Sanitation, the Indian Government has launched an initiative, "Jal Jeevan Mission" to enhance water accessibility across the country. Such initiatives are estimated to provide lucrative opportunities for the expansion of the market.

Based on product type, borewell submersible pumps outrank other pumps, accounting for nearly 55.3% of the total sales in the market in 2021. Increasing application in gardening, firefighting systems, and domestic water supply owing to its vertical as well as horizontal installation is driving the growth in the segment. "Increasing exploration of shale reserves and implementation of stringent wastewater treatment norms to support recovery across the mining and oil & gas industries are expected to augment the growth in the market," says a FMI analyst. Request a report sample to gain comprehensive insights at

<https://www.futuremarketinsights.com/reports/sample/rep-gb-817>

Key Takeaways from Submersible Pumps Market Study

The market in the U.S. is estimated to witness the fastest growth in North America, expanding at a CAGR of 3.2% during the forecast period.

Germany is expected to emerge as a highly remunerative market in Europe, creating an absolute dollar opportunity of US\$ 175.6 Mn through 2031.

China is anticipated to account for the largest share in the East Asia market, exhibiting sales growth at a CAGR of 6.1% between 2021 and 2031.

India is forecast to hold a considerable revenue share in South Asia, accounting for 1/3rd of the sales in the region by 2031.

In terms of head type, the above 100m segment is projected to dominate the market, accounting for nearly 71.3% of the demand share in 2021.

Key Drivers

High degree of water stress and increasing focus on catering to the water requirement of the domestic and industrial sectors across Qatar, Israel, Libya, and Saudi Arabia are propelling the demand for submersible pumps across the Middle East and Africa.

Increasing demand for effective water pumping and distribution solutions for industrial and domestic use along with growing government investment in wastewater treatment is spurring the

sales of submersible pumps across the municipal segment.

Key Restraints

High troubleshooting and re-installation cost along with the increasing incidence of motor failure are hampering the sales of submersible pumps.

Implementation of stringent regulations concerning the depletion of groundwater reservoirs is restraining the growth of borewell submersible pumps.

<https://www.futuremarketinsights.com/reports/submersible-pump-market>

Competitive Landscape

The top five players operating in the global submersible pumps market are Grundfos, Ebara Corporation, Xylem Inc., KSB SE & Co. KGaA, The Weir Group Plc. These companies are anticipated to account for more than 31% of the overall sales in 2021.

Leading players are emphasizing on launching novel products to expand their product portfolio. Some of the key players are aiming at strategic collaboration, merger, partnership, and acquisition to strengthen their footprint. For instance,

In May 2021, Atlas Copco, a Swedish multinational industrial company, announced acquisition of operating assets of a U.S.-based company, Medigas Service & Testing Co. Inc. The acquisition will assist the

company to expand its production line across medical and laboratory gas equipment and systems.

In May 2021, the KSB Group, a leading producers of pumps, valves and related systems, announced launched the next generation time-tested submersible grey water pumps named the AmaDrainer 3 type series. The product launch will assist the company to expand its portfolio and consumer base.

Some of the key players operating in the market profiled by FMI are:

Kubota Corporation

Wacker Neuson Group

Atlas Copco AB

KSSE & Co. KGaA

Xylem Inc.

Ebara Corporation

Grundfos

Sulzer AG

The Weir Group PLC

Tsurumi Manufacturing Co., Ltd.

Kriloskar Brothers Ltd.

Flowserve Corporation

WILO SE

PSG (Dover Corporation)

Gorman-Rupp Company

Ruhrpumpen Group

Shimge Pump Industry Group Co., Ltd.

Zhejiang DOYIN Technology Co. Ltd

Shakti Pumps (India) Ltd.

Speak Pumpen Walter Speck GmbH & Co. KG

Pleuger Industries

Mfg of : DTH Hammers, Button Bits Mining Tools & Drilling Equipments

Whizzkid has been one of the most prominent manufacturers of DTH Hammers and Button Bits to have emerged and been in operation from this part of this world for over 36 years. By supplying these products in premium quality, we have also created a mark in the export industry. The excellence assured in terms of Quality as also carved out a strong International clientele, who have been using our products in various countries.

WHIZZKID
India's most trusted DTH Hammers & Bits

Balaji Engineering
AN ISO 9001:2015 COMPANY

**DTH Hammers :**

- Higher end consistent penetration rate
- Avoidance of back hammering
- Hammer blocking
- Durability
- Corrosion and chemical resistance
- Withstanding capability at the range of higher pressure

DTH Button Bits :

- We bring forth premium Button Bits for our esteemed customers keeping in mind their demands.
- These Products are manufactured using high grade materials and ensure first class range.

Product Range :

- DTH Hammers (3-12 inches)
- DTH Button Bits (3-18 inches)
- DTH Over Burden Bits (4-14 inches)
- Drifter Bits
- Retract Bits
- Cluster Hammers
- Rock Roller Bits/Tricone Bits

SHAKTI PUMPS (INDIA) LIMITED

Shakti Pumps (India) Limited, a pioneer in manufacturing of energy-efficient pumps and motors since 1982. The company is at the forefront of providing a variety of renewable energy solutions, primarily for the agriculture sector. The company has over 1200 product portfolio, which have been indigenously developed by their Research & Development department. With an investment of 3-4% of the company's net profit towards Research & Development, innovation is the backbone of their operations. The company has a strong commitment to innovate and develop technologically advanced products to meet India's irrigation & pumping requirements. Shakti Pumps has a sprawling state of the art manufacturing facility with an installed capacity of 5 lakh pumps per annum which is strategically situated in central India at Pithampur in the state of Madhya Pradesh. Over the years, Shakti Pumps has seen a steady growth trajectory and has become one of the leading pump exporters in India. The company exports its products to over 120 countries. The company's product portfolio largely caters for applications like agriculture, irrigation, industrial applications and processes, pressure boosting in high rise buildings, rural/urban community water supply schemes, waste and sewage water treatments, fire-fighting and so on. Shakti Pumps with over three decades of experience in the pumping industry, is one of the most quality-driven pump manufacturers in the world. The company holds a dominant position in domestic solar

pumps industry including approximately 40% market share in PM-KUSUM scheme Government of India's visionary program to embrace solar power for agriculture sector. The company has committed itself to several ongoing research and development projects leading to development & creation of new-age energy-efficient pumping products and solutions.

Shakti Pumps product portfolio comprises of new-age products which are solar energy-operated pumps, electric pumps and solutions that find use in agriculture, industrial & commercial sector. With 28 patent applications, of which one patent was recently granted, Shakti Pumps has emerged as a leading renewable energy solutions company with diversified product offerings including technologically advanced utility functions.

Buoyed by 30 years of proven prowess in manufacturing Electric Motors and 5 years of manufacturing Power Electronics Equipment (Controllers), the company recently announced its foray into the EV segment with the manufacture of Motors, Chargers, Controllers and Multi - Application Component Variable Frequency Drives (VFDs) for Electric Vehicles via the incorporation of a wholly owned subsidiary.

Vision
To become a company that constantly strives for quality and customer satisfaction by providing best pumping solutions with global benchmarks and to be a company which integrates Health, Safety and

Environmental considerations into all its business decisions and activities, such there will be
Zero accident
Zero liquid discharge
Zero carbon foot print.

To excel with an emphasis on best business and ethical practice with strong organizational values justifying the interest of all stakeholders.
Mission

To work relentlessly towards coming closer to our vision statement by offering best working environment and training focusing on integrity and ethics.

To empower the workforce to offer products and services that exceeds customer expectations by providing value for money and ensure handsome return to our employees and shareholders.

To create a safe workplace by reducing injuries, accidents and environmental impact for current and future generations.
Infrastructure

Here at Shakti we have a unique infrastructure in place which allows us to meet ever changing market demands, whilst still delivering quality products in high volumes. We are able to do this thanks to the specialised set-up of our facilities, which allows Shakti to accurately allocate work to specific units, ensuring production timeframes and quality control are as efficient as they can be.

The different units Shakti have worked hard to set up and maintain are:

SEZ Unit:

Set up in the Special Economic Zone (SEZ) in 2007 in the Pithampur region of India, our facilities here are responsible for the production of 100% stainless steel submersible pumps to be exported all over the globe, in answer to the call of different international market requirements. The unit houses an advanced modern plant and various pieces of high-tech machinery able to meet the standards of the international market. This means Shakti is able to make numerous differences to the products produced depending on the demands of the client and in response to any regulations in place related to their geography. It also ensures Shakti can meet different international standards and guarantee global customer satisfaction.

Domestic Unit

This other unit is also situated in Sector III of the Pithampur Industrial Area, but this

particular Shakti development consists of a number of plants able to meet the specific market needs of different product groups. This unit is a particular asset to Shakti, as it allows us to tackle the different challenges thrown up by a number of different product groups.

-4" Motor Manufacturing Plant:
this particular plant is exclusively used for the manufacturing of 4" submersible motors. It is equipped with state-of-the-art manufacturing equipment to ensure every submersible 4" motor produced is of the highest quality.

-6", 8" and 10" Motor Manufacturing Plant:
this plant is focused on the manufacturing of 6", 8" and 10" submersible motors for pumps of corresponding sizes. Again, this plant houses state-of-the-art manufacturing equipment to ensure Shakti can compete on a global scale across all these different product sectors. The equipment housed in this plant is the most modern and up-to-date available to ensure all 6", 8" and 10" motors are the most advanced in the current market.

-Submersible Pump Manufacturing Unit:
this unit is used solely to produce 100% stainless steel submersible pumps in various sizes for use in the domestic market. The unit is able to meet the constantly changing demands of the domestic market due to its technologically advanced assembly lines and equipment.

-Industrial Pumps Manufacturing Unit:
the final plant in the Unit III development produces pumps for various industrial applications, including vertical multi-stage centrifugal pumps, pressure booster pumps, hydro systems, self-priming pumps, open well pumps, end solution pumps, sewage and effluent water pumps, boiler feed application pumps and pumps for use in firefighting, among others. This unit is also able to meet constantly changing market demands in a rapid turnaround time thanks to the use of cutting-edge technology and the specialised focus of the workers in the unit.

In order to ensure every pump is of the highest quality, Shakti has installed a computerised testing facility to measure the performance of the pumps produced and compare them to the international market. This means that Shakti is always striving to improve operations and its ranking in the global marketplace.

Electronics and Control Plant

MANUFACTURING FACILITIES

The E&C Plant is equipped with state-of-the-art machinery and skilled manpower to provide reliable and quality products. The whole manufacturing is process-driven and independent of manual soldering and testing due to the latest technology machines.

SMT ASSEMBLY

The plant has the capability to place components ranging from 0402 (01005) package size components to the larger SMT packages with absolute precision, matching IPC-A-610 standards. With the high level of placement accuracy and solder joint integrity, the best quality is consistently achieved. With two modern SMT lines, Shakti can place up to 99,000 placements per hour and are fully equipped to undertake PCB batches from low to high quantities.

THROUGH-HOLE COMPONENT ASSEMBLY (THT)

Traditional leaded through-hole components can be either flow soldered or fitted by our dedicated, highly skilled assembly team. This approach offers a robust, high-precision expedient assembly solution. With their wealth of training to the highest IPC-610 standards, Shakti's staff can offer a level of soldering ability that sets us apart from the competition.

ENCAPSULATION & CONFORMAL COATING

Our conformal coating material is a thin polymeric film that conforms to the contours of a printed circuit board to protect the board's components. Typically applied at 10-210µm (micrometers) it is applied to electronic circuitry to act as protection against moisture, dust, chemicals, and temperature extremes.

PCB FUNCTIONAL TEST

E&C Plant has a highly skilled team of Test Engineers and Technicians as well as a large range of testing equipment, bench, and functional test equipment. Our staff undergo cross-product training and have a huge range of experience within the field of Electronics Test. Customers can have the confidence that the product has been fully tested to their specifications.

GT35 Drilling Rig

Venture Drilling Supply is Proud to present the proven GT-35 designed by GTD Drilling. We know that no rig can do every job perfectly, but the GT35 comes close. We believe it's best in class to meet the demands of the growing geothermal industry. Read the specs, watch the videos, and reach out to get your own.

SAFE

Safety and performance come standard on the GT35. Minimizing your risk is a vital feature of the drill. The hands-free rod handling, triple clamp breakout system, and safety cage not only improve production, but safely remove your drill crew from the high risks associated with tooling makeup and breakout. By eliminating a traditional on-deck air compressor the GT35 not only reduces your daily fuel consumption but safely reduces operating noise below 90 decibels.

EFFICIENT

The GT35 will equip you to efficiently execute all rotary drilling methods. Standard options include onboard mud pump, DTH lubricator, water injection, and an air manifold. With this configuration, you can quickly change from mud to air when necessary.

PRODUCTIVE

The GT35 has the power and agility you need to execute production geothermal jobs. With 35,000-lb of pullback, 800' of pipe onboard, and hands-free rod handling, it outperforms traditional multipurpose drilling equipment. The drill is big enough to handle demanding large-scale projects but at only 7.6 feet wide, it fits perfectly in dense urban or residential environments.

DOWN THE HOLE RIG MACHINE

Kiran Engineers an ISO 9001:2008 Company, is the outcome of meticulous planning and deep industry knowledge. We are acclaimed as a distinguished manufacturer, Exporters and supplier of all kinds of Water Drilling Rigs, Mining Rigs and Equipment in global market which are widely used for water wells, core drilling and multipurpose drilling. These equipments are appreciated for their excellent functionality, high speed operations, handling capacity, sturdy construction and energy saving features.

Our wide range of high performance drilling equipment's include D.T.H. Drilling Rigs, Truck Mounted Drilling Rigs, Tractor Mounted Drilling Rigs, Trolley & Trailer Mounted Drilling Rigs, Crawler Drilling Rigs, Wagon Drilling Rigs, Slim Drilling Rigs, Inwell Type Lightweight Rigs, etc.

Engineering Industry requires precision, accuracy and perfection as all the activity in this fields are performed on pre calculated formulas.

Kiran Engineers can produce any tailor made & customized solution for global market.

Kiran Engineers has established their brand image by providing best quality products which are as par with international standards & cost effectiveness with higher efficiency products.

Sandvik Announces 'Opt-Out' Carbide Drill Bit Recycling

Company Goal is 90% of Own Bits by 2025

Sandvik has introduced what it calls the industry's first "opt-out" recycling program for mining customers using carbide drill bits.

"Our breakthrough opt-out program supports our customers' drive to mine more sustainably and demonstrates our commitment to delivering on Sandvik's ambitious sustainability goals to halve CO2 emissions by 2030," says Jens Holmberg, president of Sandvik Mining and Rock Solutions' Rock Tools division. "We are determined to lead the industry into a new era, fully committed to embed circularity across an essential component of mining."

Tungsten, a component in cemented carbide, is scarce and finite, with known deposits expected to run out — perhaps as soon as 40 years from now at current consumption rates. Recycling reduces reliance on new tungsten. It also requires 70 percent

less energy and reduces CO2 emissions by 64 percent, the company says, while also cutting nitrous oxide emissions.

Sandvik says it aims to recycle 90 percent of the bits it makes by 2025. The scope of the initiative also includes bits from other manufacturers.

The company calls recycling of dulled drill bits an important aspect of mining industry sustainability, particularly amid soaring demand for mined materials like lithium and cobalt for clean energy efforts.

Historically, carbide recycling has suffered from limited collection of used products. Sandvik says it can now help customers overcome that challenge with extraction support. The company says this makes it easier, faster and safer to recycle dull drill bits, using a new patent pending method to reduce emissions from transportation up to 93 percent.

"Customer response has been overwhelmingly positive," Holmberg says. "We need to transition our

industry at an unprecedented speed. Our recycling program is one of many new initiatives you will see from Sandvik's Rock Tools division moving forward."

To coincide with the launch of the recycling program, Sandvik also launched a video designed to "address the stresses often associated with recycling." The 1-hour video highlights the benefits of carbide recycling while encouraging everyone to experience the "calmness and wellbeing" of recycling.

"Our carbide recycling program is not only a good decision for the environment," Holmberg said. "It also creates a sense of calm about doing the right thing."

Sandvik offers equipment, tools, service and technical solutions for the mining industry and rock excavation within the construction industry. The company has more than 40,000 employees worldwide. For more information, visit www.sandvik.com.

EQUATOR HOSE LINE

EXTREME TEMPERATURE APPLICATIONS

hydraulic oil & compressed air

MAXIMUM OPERATING TEMPERATURE

150° C
300° F

KEY FEATURES

- Wide range temperature resistance
- EN/DIN and new SAE pressure rating
- Outstanding Ozone resistance
- Superior weather and UV resistance
- High aging resistance

APPLICATIONS AND FLUIDS

- Hydraulics: low-medium pressure lines in extreme temperature conditions
- Mineral oils, glycols and polyglycols, transmission fluids, air with oil vapours, mineral oils in aqueous emulsion

ELGi introduces All-Women Production Lines at the ELGi Air Center

Reiterates commitment to building a gender-diverse, inclusive workforce via women empowerment and skill development

Coimbatore, India, July 11, 2023: Elgi Equipments (BSE: 522074 NSE: ELGIEQUIP), has introduced assembly lines with a 100% female workforce at the ELGi Air Center in Coimbatore, Tamil Nadu, India. Twenty young women are managing operations at the air end assembly line, encapsulated air end assembly line, and the ELGi new generation compressor top block assembly line, delivering over 150 air ends and top blocks daily. These young women have successfully graduated from the ELGi Vocational Training School (EVTS), completing a comprehensive three-year technical training program comprising modules on machining, welding, electrical work, basic engineering, and advanced production technologies. All assembly lines at the ELGi Air Center have been automated to ensure an inclusive working environment; this will enable the achievement of torque without fatigue and significantly enhanced material handling capabilities, enabling young girls and women to excel in their roles and make invaluable contributions on the shop floor. In line with ELGi's focus on fostering a safe and healthy work environment, every woman working on the shop floor has received comprehensive

first-aid training. Moreover, a dedicated occupational health center ensures immediate support whenever needed to prioritize their well-being, further promoting a safe and comfortable working environment. For over 60 years, ELGi's pioneering products and compressed air solutions have served various applications across industries ranging from manufacturing, food & beverage, construction, pharmaceuticals, and textiles in over 120+ countries. Powering a 400+ product-strong portfolio, ELGi's state-of-the-art global manufacturing facilities, spanning three continents, are committed to carbon neutrality, water conservation, and circular waste management. DOOSAN®

Portable Power

Doosan Portable Power has been serving the large water well drilling industry from more than 2 decades now.

The Doosan large range of portable compressors cover 700cfm to 1400cfm in flow with 250psi to 365psi working pressures. Known for their reliability and unique Automatic Temperature Control (ATC)* these compressors provide excellent drilling performance, fuel economy, compact design for plug and play mounting.

In its quest for continuous product improvement to meet customer expectations and providing cutting edge solutions to this industry segment, Doosan Portable Power offers certain models with electronic engines and dual pressure regulation. These compressors can also be deployed for deep piling work in infrastructure segment.

Kirloskar Brothers Launch Borewell Submersible Pumps

The Indian pump manufacturing company, Kirloskar Brothers Limited, has just released a new product line of borewell submersible pumps, the NEO Series 4-in. These pumps have been designed for the rural, domestic, and community water supply markets. This includes building, farming, and construction sectors. Ideal for usage in sandy borewells, the NRO Series 4-in borewell submersible pumps include a Sand Fighter arrangement which restricts sand entry and safeguards pump-set brushes. This design also features an advanced water-cooled motor to ensure 30% greater discharge and 60% energy-saving capabilities. This new product range also offers improved corrosion resistance and better pump and motor alignment. The NEO Series 4-in pumps are functional in adverse working conditions and even feature extra overloading capacity and a carbon plus stainless-steel thrust plate. This easy-to-repair design also includes FG200 graded casting with cathodic electro disposition (CED) coating to ensure corrosion resistance. This new series has NEMA couplings and a high torque motor capable of ranging from 180-240 volts. This protects the motor from burning and balances rotating parts for lesser vibrations. Image credit: Kirloskar Brothers Limited

ANDRITZ

ANDRITZ presents innovative product portfolio for the water, wastewater, and waste management industries at IFAT 2022

International technology group ANDRITZ will be exhibiting its broad range of proven and new technologies, services, and automation solutions for the water, wastewater, and waste management industries at the IFAT 2022 show in Munich, Germany.

From May 30 to June 3, 2022, ANDRITZ will be presenting its products and solutions at two different locations:

Hall A1, booth 350: water treatment, pumping technology, and sludge processing solutions

Hall B6, booth 151/250: trend-setting recycling solutions for various waste streams

SHOWCASES INCLUDE:

ANDRITZ Underdrain system – a maintenance-free gravity filter that guarantees a smooth filtration process. Water intake screens made from stainless steel with replaceable screens that limit repair and maintenance costs complete the portfolio.

Economical pumping technologies, such as the ANDRITZ submersible centrifugal pump with highest efficiencies of up to 88% and flow rates up to 2,200 m³/h. The design of this

pump allows optimal conveyance of pre-cleaned wastewater.

Efficient sludge thickening and dewatering solutions (screw presses, decanter centrifuges, filter presses, drum and gravity belt thickeners) that ensure a reliable and stable sludge treatment process at reasonable cost. New systems supported by artificial intelligence for automatic polymer dosage in real time help to reduce operating costs by up to 40%.

Proven paddle, belt, drum and fluid bed drying systems that help to minimize disposal costs by producing a broad portfolio of dried sludge products profitably.

Fluidized bed boilers that use waste as fuel and are suitable for thermal treatment of almost all types of fuel, such as RDF (refuse-derived fuel), pre-treated municipal solid waste (MSW) and industrial waste, sludge (e.g. paper

sludge, municipal sewage sludge), and many more.

Recycling solutions for a wide variety of different applications, such as e-waste, RDF production, waste textiles, and many more. ANDRITZ Recycling will also present its new ANDRITZ Recycling Technology Center as well as the latest innovations in its ADuro shredder product line.

Advanced automation and digitalization solutions for new and existing plants to optimize efficiency and maximize profit.

Service solutions encompassing spare parts, upgrades and rental machinery through to service level agreements, process optimization and training programs in order to reduce downtime, increase predictability in operations and enhance the overall efficiency of production operations sustainably.
