Atlas Copco

Let efficiency flow

Mining with Atlas Copco's central portable electric screw compressor hub

We are excited to introduce a groundbreaking approach to air supply in mining environments. The central hub with portable electric compressors can deliver high-pressure air throughout the area via a vast network of pipes. This method is more efficient, cost-effective, time-saving, and eco-friendly.

E **Air** = **NO DIESEL REQUIRED** 

These light and compact air compressors deliver compressed air with flow ranging from

Free Air Delivery: 106 – 1300 CFM	Pressure: 100 – 363 psi	Motor Power: 18.5 – 315 kW
--------------------------------------	----------------------------	-------------------------------

DRIVEN BY POSSIBILITY™

YOU KNOW THE DRILL. SO DO WE.

//////
Gates innovative solutions can be found on virtually every part of a water well drilling rigs, and the equipment that supports operations. From top drives to mud pumps, and everything in-between, our team of industry experts and product engineers design, test, and manufacture Gates solutions that are trusted to power your most complex pumping and hydraulic equipment under the most demanding conditions.

G2XH XTREME™ HEAT HOSE

- Long life oil resistant tube
- 2 wire performing hose
- Abrasion resistant robust cover
- MSHA “2G” approved cover
- More flexible
- Pin pricked cover

Recommended for pressurized oil/air compressor delivery lines, specially designed for water well rig application.

Working Pressure: 1800 PSI (-24) & 1500 PSI (-32)

Temperature: -40°C to +149°C

DRIVEN BY POSSIBILITY™

G2XH XTREME™ HEAT HOSE

- Long life oil resistant tube
- 2 wire performing hose
- Abrasion resistant robust cover
- MSHA “2G” approved cover
- More flexible
- Pin pricked cover

Recommended for pressurized oil/air compressor delivery lines, specially designed for water well rig application.
Working Pressure: 1800 PSI (-24) & 1500 PSI (-32)
Temperature: -40°C to +149°C

MXT™ WIRE BRAID HOSE - SAE 100R16

More flexible with up to 40% lower force-to-bend for faster and more ergonomic installation.
Temperature Range: -40°C to +100°C

MEGASYS™ MXG™ 4K SAE 100R12

Lightweight, highly flexible, and qualified to ONE MILLION impulse cycles.
Temperature Range: -40°C to +121°C

MINE MASTER™ AIR DRILL HOSE

Recommended for Heavy duty, high pressure use on Industrial construction & pneumatic mining applications.
Temperature Range: -32°C to +82°C

AIR-WATER HOSE

For all air and water applications requiring maximum flexibility in engineering industry, workshops, shipyards, irrigation etc.
Temperature Range: -30°C to +82°C

FLEXMORE HOSE

For High pressure Hydraulic lines
Working pressure: 3600 PSI
Temperature Range: -40°C to +100°C

G1 1-WIRE BRAID HOSE - SAE 100R1

For Medium pressure hydraulic lines, Meets performance requirements of EN 853 1SN.
Temperature Range: -40°C to +100°C

G1 H HIGH TEMP 1- WIRE BRAID HOSE

For Medium pressure hydraulic oil lines, Meets or exceeds the performance requirements of SAE 100R1 Type AT
Temperature Range: -40°C to +135°C

4XH SPIRAL WIRE HOSE

For High pressure and high impulse applications. Most flexible EN 856 4SH hose in the industry.
Temperature Range: -40°C to +100°C

4XP SPIRAL WIRE HOSE

For Extremely high-pressure and high impulse hydraulic applications. Most flexible EN 856 4 SP hose in the industry.
Temperature Range: -40°C to +100°C

Gates Corporation Invests to Establish Gates Global Technical Center in Lalru, Punjab, India

[India, 13 June] – Gates Corporation, a leading global provider of application-specific fluid power and power transmission solutions announces it is establishing a Gates Global Technical Center in Lalru, Punjab, India. The foundation stone laying ceremony for this milestone project will be held on June 13th, with Dr. Thomas Strong Moss, Senior Vice President of Innovation, Gates Corporation and Mr. Rajesh C. Bhandari Senior Managing Director, Gates India, leading the event.

This initiative marks a major step for Gates in India, highlighting the company's commitment to the region as a center for talent and R&D excellence. By setting up this cutting-edge facility, Gates aims to enhance

its capabilities in innovation to deliver advanced solutions to its global customer base.

Dr. Moss expressed his enthusiasm for the project, stating, "we are excited to establish the Gates Global Technical Center in Lalru, Punjab. This new Technical Center reflects our confidence in India as a talent hub and R&D center. This investment will strengthen our presence in India and drive innovation to benefit customers worldwide."

The Gates Global Technical Center will serve as a hub for collaboration and innovation, fostering partnerships with local institutions and industry stakeholders to address engineering challenges and drive breakthroughs.

KUMAR ENGINEERING WORKS

INDIA'S FASTEST GROWING ROTARY BOREWELL MACHINES MANUFACTURER

MINI HYDRAULIC WATER ROTARY BOREWELL MACHINE

TECHNICAL SPECIFICATIONS

MACHINE

- › Lenght - 10feet
- › Working Width - 4'6"feet
- › Standby Width - 3'6"feet
- › Working Height - 12'3"feet
- › Standby Height - 8'5"feet
- › Folded Height - 5'6"feet
- › Weight - 1200 Kgs.

ENGINE

- › Engine make - Eicher (TMTL)
- › Engine power - 22 bhp
- › Displacement - 1557 cc
- › Rated Speed - 1500 RPM
- › Cooling medium - Air
- › Fuel Tank Capacity - 31 Liters

HYDRAULIC MOTOR

- › Max. Torque - 380 N.m.
- › Pressure - 70 bar
- › Speed Range - 5-160 r/min
- › Max. Output Power - 4 Kw

HYDRAULIC OIL PUMP

- › Type - Gear Pump
- › RMP - 650-2500 RPM
- › Max. Oil Flow - 100 LPM
- › Pressure - 138 BAR

- › Hyd. Tank Capacity - 60 Liters

DRILL ROD

- › Diameter - 50mm
- › Length - 2 Meter
- › Gross Weight - 15Kg each

Model : INDRA22EH

- › 22Bhp Diesel engine
- › BMR 400 Hydraulic Motor
- › 120Lpm Hydraulic Pump
- › Foldable Tower
- › 300ft Drilling Capacity
- › 10-12inch Hole Diameter

A yellow tracked excavator is shown in a dark, rocky underground environment. The excavator is equipped with a red attachment, possibly a grapple or a specialized digging tool. The machine is positioned on a rocky surface, and its arm is extended towards the right side of the frame. The lighting is dim, highlighting the textures of the rock and the metallic surfaces of the excavator.

Powered by a 120-horsepower Tier 4 Final engine, the YellowFox has a breakout force of 120 kN and a tear force of 115 kN. The boom can swivel 45 degrees to the left and right. It comes equipped with a push rod to protect the cylinder from falling debris. Wimmer has

Looking at the specs of the base machines, the Liebherr R 914 Compact Litronic has a tail radius of 5 feet 1 inch. The undercarriage of the R 920 Compact Litronic features an X-frame with integrated eyelets and travel gear and track rollers with lifetime lubrication.

Drilling Enigmas: Two Unusual Michigan Well Casings

Discover two unique cable tool drilling cases from a drilling expert.

Case #1: Thinwall 4"
The first one I want to write about is what I will call thinwall 4". Now this was 4-1/2" OD galvanized casing with a thinner wall than standard 4". I believe standard 4" has a wall thickness of .237". If I'm not mistaken, this thinwall type had a wall thickness of .1875" or 3/16" plus or minus. I believe this thinwall casing had a finer thread type to avoid nearly cutting through the wall when threading. I encountered this thinwall casing on some pump replacement jobs in far Southern Michigan. Of course, with the thinner wall came a larger ID which was a good thing when installing a 4" submersible pump. The cable guard and motor diameter on many 4" submersibles made it a tight fit in a typical 4" well, so the extra ID was more than welcomed.
How much heavy driving this thinner wall pipe could stand is something that I don't know. These wells were over 150 feet deep, as I recall, and were drilled by cable tool so that the thinwall must have stood up okay. The wall thickness of this pipe was comparable to that of a standard 2" Schedule 40 pipe. My dad drilled quite a few 2" wells to over a 200-foot depth, and the casing stood the driving, so probably the 4" thin wall was just as robust as the 2" standard. I have only seen a couple of these thinwall-cased 4" wells in my career and don't really know why that casing was selected.
Case #2: 4-1/2" ID Well With Cable Tool-Drilled Couplings
Another really unusual casing that I saw only once was a 4-1/2" ID well with couplings on the inside drilled by a cable tool machine. Another veteran cable tool driller and I were invited to watch this well being drilled. The contractor was a very competent and well-known cable tool driller. He was at least a second and maybe a third-generation driller. He had a spudder-type rig that was plenty big enough for the job, and it had an extra tall mast and other custom features he had added. The tall mast allowed for a long string of tools, which was a desirable feature as weight on the bit is a significant factor in cable tool drilling. This man was known as 'Mr. Cable Tool' in Michigan, and as far as I know, he is still alive but retired. He was a very good cable tool driller and a strong advocate for that type of drilling.
This drilling contractor obtained some plain-end steel casing that was 4-1/2" ID and 5" OD. As I recall, it was in 20-foot lengths or

perhaps 21 feet, a standard length of a section of steel pipe. He cut up some 4" ID by 4-1/2" OD sections of pipe (Schedule 40 pipe) into pieces about a foot or 1-1/2 feet long. He inserted this into one end of the larger pipe and attached it with a fillet weld.
A fillet weld is much easier to make than a butt weld, in my opinion, especially in the field. His rig had enough mast that he could get his tool string up and into a 20-foot section. He would insert a new

section of the so-called coupling (the smaller pipe) into the lower section and complete the joint by welding. He would then proceed to drive the whole darn thing into the ground, and with a long string of tools, he could easily do this. I don't think he reamed the smaller coupling sections, so when he lowered his tool string to drill out the end and his baler to recover slurry, you could hear them going "clunk, clunk, clunk" down the casing. The cable tool driller who accompanied me that day and I never quite figured out the purpose of this "couplings on the inside" method. It possibly had something to do with grouting issues. I think the contractor drilled only a few wells by this method and then went back to the standard "couplings on the outside" method or butt welding his casing. He called the "coupling on the inside" method 'Smooth Sleeve Casing.'
The grouting of cable tool drilled holes I referenced above was a hot topic in Michigan in the 1980s when this all took place. Up til then, with the exception of high rock areas where cement grout was placed around casing that was lowered into an oversized hole, most all casing in drift conditions was just hammered in and left that way.
Questions were asked about holes drilled in clay and whether the clay adhered to the casing wall after a coupling went through it, making a larger hole. I will discuss how this was settled in my next column, as attempting to do that would make this column way too long to read. Stay tuned for the next chapter.
Michigan Weather Watch
We have had a strange winter here in Michigan with a lot of nasty cold rain and only one decent snow that melted quickly. In the middle of March, our lawns are pale green and are not growing in these frigid temperatures, sometimes in the 60s during the day and low 30s at night.
This will probably change and we will get our fair share of snow—we always have in my years on earth. For the drilling industry pros out in the field right now, fingers crossed the weather levels out, and that sunshine and rainbows are headed our way. Stay tuned for the next chapter of 'drilling the way it used to be.'

Wireless Horizontal Directional Drilling in North Dakota

In summer 2022, the North Dakota Soybean Processors (NDSP) in a joint venture formed by CGB Enterprises Inc. (CGB) and Minnesota Soybean Processors (MnSP) broke ground on a \$400 million soybean crushing plant in Casselton, North Dakota. Forecasts predict that in its inaugural year, the plant will process an impressive 42.5 million bushels of soybeans. However, this ambitious endeavor necessitates substantial water resources for its operational needs, particularly for the boilers and cooling towers. To address this demand, a pioneering solution was devised: construction of two parallel HDPE pipelines spanning more than 26 miles. The intricate pipeline system was built by Abbott, Arne, Schwindt Inc., a general contractor specialized in rural water infrastructure projects. It comprises a 12-in. line heading west from Fargo, which will meet up with and join an 8-in. return line of HDPE pipe. The 12-in. line is slated to convey 375 gallons per minute (gpm) to the Casselton plant, while the 8-in. HDPE piping system will move about 250

gallons of wastewater per minute from the plant, diverting it to the Fargo wastewater treatment complex. This initiative is poised to evolve into the largest rural water pipeline network in North Dakota. The project encountered numerous challenges, notably the horizontal directional drilling (HDD) crossings of roads, railways and private properties. A prominent example was the developing multi-billion-dollar Fargo-Moorhead Canal project, that required two directional drilling bores exceeding 1,600 ft in length. That's where Central Trenchless Inc. came in. Central Trenchless is a leading trenchless contractor in North Dakota, and leveraged its expertise and specialized equipment to execute such a project. For the two 1,600-ft drills, the contractor deployed its American Augers DD-440T, a rig with 440,000 lbs of pulling force — which is more than enough for installation of the casings for the HDPE pipe. Given the soft ground conditions characterized by a mixture of sand and clay, mitigating inadvertent returns was a major concern. The solution came when Central Trenchless owner Shaun Houim contacted Radian Drilling Services, a company specialized in guidance services for the HDD industry. The options for tracking the pilot hole were evaluated — it would require accurate tracking, annular pressure monitoring and a "as fast as you can drill" approach. Together, the two companies decided the best route for drilling these two pilot holes would be to use wireless technology combined with real time annular pressure monitoring. The wireless technology that was used is manufactured by Boregdyde, and has been in the market for several years. It has been used in the United States and Canada on hundreds of crossings. The main advantage of this technology is the non-existence of downhole wireline, therefore, connection time (adding new pipes on the rig) is decreased by 75 percent since no wire splices are made. Also, wireline shorts which result in costly trip out/trip in are not a concern. In the case a trip out is needed for annular pressure relief or any other reason, the trip in and trip out time is significantly less using the wireless technology — sometimes achieving as much as 600 ft per hour. For these reasons, the wireless technology was a perfect fit for the project. Not only the connection time was going to be greatly reduced, but in case there was any issues with increasing annular pressure, or the need to push ream the partially drilled bore, tripping would be done seamlessly and in a fraction of normal wireline time. After a few weeks of delay due to unexpected weather conditions, mobilization began in January of this year. At the same time, equipment was being mobilized to the HDD jobsite, the construction of the Fargo-Moorhead Canal was taking place, and approaching the two drills' centerline. Giant excavators and dump trucks were moving tons of dirt as they dug the future 30-ft deep canal with 20-ft high levees. What was once flat farm land was going to become an important diversion canal. Radian vice president of operations Randy Mowat was assigned to be the lead guidance engineer of the project. Land surveying activities were swiftly conducted and coil grid was laid out. While the crew was getting all the equipment ready and mudding up the tanks, Mowat started putting together the wireless equipment and the pilot hole was under way. The first drill to be completed was for the installation of a 12-in. fusible PVC line that was going to serve as casing for the 8-in. HDPE water line. The initial challenge during pilot hole was discovering the speed and push force necessary to maintain a solid hole and keep the annulus pressure under the permitted allowance. After nine hours, the first 1,600-ft pilot hole was complete, perfectly on target. The crew broke down the tooling, added a reamer to the assembly and pulled the casing in one shift. After moving the rig more than 20 ft, pilot hole No. 2 was in progress. The pipe to be pulled on the second drill was an 18-in. fusible PVC that would serve as casing for the 12-in. HDPE. Since the driller and crew had the experience of the first drill, the second pilot hole was completed in only 7.5 hours. In many cases in the HDD industry, the pilot hole phase is the most expensive part of a project. By decreasing the pilot hole drilling time and normal trips, the wireless technology can help HDD contractors improve efficiency and decrease production costs.

PHLC32
Fully Automatic Hose
Crimping Machine

Quality Products,
Effective
Services

Model PHLC32 Hose Crimping Machine is Mainly
used for crimping of high pressure rubber pipe
assembly used in Hydraulics. It can also be used for
Crimping tow-way bends, especially large bends
and irregular shape bends.

The machine features small and portable
appearance, big force, low noise and easy to
operate. The Crimping can be precise adjusted
through a touch screen.

Technical Specifications

Model	PHLC 32
Crimping Range	1/4" to 2"
Max Crimping Force	100 Tons
Rated Pressure	180 bar
Weight	280 kg
Dies Quantity	8 Nos(1/4", 3/8", 1/2" & 5/8", 3/4", 1", 1.1/4", 1.1/2", 2")
Power & Voltage	415 V 3 Phase, 5 Hp
Scale Accuracy	20 microns
Overall Dimensions	750 x 500 x 840 mm
Tank Size	50 liters
Motor Make	5 Hp Havells / Crompton
Hydraulics (Pump/Valves)	Yuken, Polyhydron

Features :

- ◆ Capacity 1/4" - 2" Spiral Hoses crimping.
- ◆ 8 Sets of CNC Precise wire cut Dies 1/4", 3/8", 1/2" & 5/8", 3/4", 1", 1.1/4" 1.1/2", 2".
- ◆ Automatic & Manual Modes of operation
- ◆ Horizontal Alignment.
- ◆ Robust Built Which combined best features of Horizontal Crimp technology.
- ◆ User friendly operation
- ◆ Training on shop floor along with machine.
- ◆ Single Source Procurement for HOSES & FITTING at reasonable pricing.

Dominion Energy Virginia Finishes Burying 2,000 Miles of Power Lines

Just ahead of the Atlantic hurricane season, Dominion Energy Virginia has finished burying 2,000 miles of previously-overhead power lines as part of its Strategic Underground Program.

Launched in 2014 to reduce storm-related power outages and shorten restoration times, the undergrounding program focuses on burying power lines in the most outage-prone areas. The company plans to bury several thousand additional miles of overhead lines as the program continues in the coming years. "We launched this program a decade ago after finding that a significant number of storm-related power outages were occurring in a relatively small number of areas," said Ed Baine, president of Dominion Energy Virginia. "By burying the lines in these outage-prone areas, we're not only reducing the number of outages, but we're also shortening how long it takes to get the power back on."

The Strategic Underground Program is one of several programs that the company has launched in recent years to reduce power outages and make the grid more resilient. The company's Mainfeeder Hardening program, for example, is replacing older poles with taller, stronger ones that are rooted deeper in the ground and spaced closer together. The new poles are engineered and built with fiberglass cross-arms, which help prevent fallen trees or limbs from bringing down the entire pole.

Since 2019, the company has hardened over 265 miles of power lines, with the ultimate goal of hardening 1,000 miles by 2030.

The Atlantic hurricane season began on June 1 and runs through November 30. This season is expected to be active.

DHIRAJ RIGS

AN ISO 9001:2008 CERTIFIED COMPANY

Mfg of : DTH Hammers, Button Bits Mining Tools & Drilling Equipments

DTH Hammers :

- Higher end consistent penetration rate
- Avoidance of back hammering
- Hammer blocking
- Durability
- Corrosion and chemical resistance
- Withstanding capability at the range of higher pressure

DTH Button Bits :

- We bring forth premium Button Bits for our esteemed customers keeping in mind their demands.
- These Products are manufactured using high grade materials and ensure first class range.

Product Range :

- DTH Hammers (3-12 inches)
- DTH Button Bits (3-18 inches)
- DTH Over Burden Bits (4-14 inches)
- Drifter Bits
- Retract Bits
- Cluster Hammers
- Rock Roller Bits/Tricone Bits

READY MIX PLASTER PS & PS+

UNIV-PS is a premixed ready to use Silica (SiO_2 98% +), Cement Base High Quality Adhesive Compound used for external as well as internal plastering by Manual or Machine base applications, which ensures quality consistency. UNIV-PS is a single component water resistance monolithic plastering/rendering mixture with a ratio of Pure Silica, Cement and Adhesive Compound for applications in civil construction works.

FLOOR TILE ADHESIVE MS & MS+

UNIV MS & MS+ is a premixed ready to use GREY Base Silica (SiO_2 98%+), Cement Base High Quality Adhesive Compound for all type of Tiles & Natural Stone fixing applications for external as well as internal usage, which ensures consistent quality. UNIV is a single component water resistance bonding mixture with a ratio of Pure Fine mess Silica, Cement and Adhesive Compound for applications in civil construction sites.

WALL TILE ADHESIVE KJ & KJ+

UNIV KJ & KJ+ is a premixed ready to use GREY Base Silica (SiO_2 98% +), Cement Base High Quality Adhesive Compound for all type of Tiles & Natural Stone fixing applications for external as well as internal usage, which ensures consistent quality. UNIV KJ & KJ+ is a single component water resistance bonding mixture with a ratio of Pure Fine mess Silica, Cement and Adhesive Compound for applications in civil construction sites.

BLOCK JOINT MORTAR AP

UNIV's AP is a premixed ready to use Silica (SiO_2 98% +), Cement Base High Quality Adhesive Compound Designed for use with water to produce high strength thixotropic mortar, for laying Aerated Light weight concrete, Fly ash bricks, cement hollow blocks, Cellular concrete blocks or smoothing over the block work surface in layers of up to 2mm to 8 mm thickness, that meet and exceed the requirements of National and International Standards. For Thin jointing with high adhesion to contribute to load bearing capacity of masonry

Epiroc Introduces DM30 XC Blasthole Drill for Maximum Productivity

Epiroc, a leading productivity partner for the mining and infrastructure industries, introduces the DM30 XC blasthole drill that is suitable for a variety of multi-pass rotary and down-the-hole (DTH) drilling applications. Built off the same proven, reliable platform as the Epiroc DM30 II, the

new DM30 XC offers 33% more power and many benefits to customers. The DM30 XC is designed for maximum productivity and efficiency due to increased rotary torque, increased pulldown, and a larger hole range capability. The DM30 XC is built to handle a 4- to 6 1/4-inch (101 - 159

mm) drill pipe and has a weight on bit up to 44,000 lbs. (20,000 kg). The heavy-duty, crawler-mounted, hydraulic top head drive drilling rig features a 30-foot (9.1 m) drill pipe change and a standard carousel.

"The DM30 XC is built tough for the most demanding jobs, and high quality at an excellent value is what sets it apart from other drills in its class," said Mark Stewart, regional business manager, Epiroc Surface division. "The drill is designed for mining so the structural components will hold up to the heavy-duty cycles required in a mining drill. The robust frame and tower weldments are manufactured to last the lifetime of the machine."

With a starter rod under the rotary head, the DM30 XC can achieve a total clean depth capacity of 148 feet (45.1 m) for multi-pass applications and 28 feet (8.5 m) for single-pass applications. High efficiency and a 300-gallon fuel tank allow the rig to run for up to 16 hours before needing a refill for continuous operation. In addition, the smaller, compact footprint of the DM30 XC makes it easy to maneuver on tight benches and simple to transport over between pits.

No matter the customer's need, the DM30 XC offers options to suit any application. Customers can choose a low- or high-pressure compressor to create the right configuration for their drilling operation. A spacious one-piece FOPS (Falling Object Protective Structure) rated cab with electric over hydraulic controls offers enhanced safety, visibility and operator comfort. The DM30 XC is easy to operate, especially for drillers who have experience in other DM series machines. The ergonomic controls layout allows immediate switchover from drilling to tramming mode, maximizing time available to drill.

The DM30 XC is equipped with an Electronic Air Regulation System (EARS) that provides low load start up and easy adjustment of bailing air to save horsepower and lower fuel consumption, extending power component life and decreasing total cost of ownership.

Customers can add even more flexibility to their DM30 XC with Epiroc's Rig Control System (RCS) Lite, which offers several safety and productivity features. It also provides a convenient foundation to add more functionality and technology options in the future without a major rebuild of the machine.

RCS Lite allows all Epiroc rotary drills to have the same onboard display and system for consistent operator training and service. RCS Lite offers customers three different packages to choose from. It is a modular solution that delivers efficiency now, along with the opportunity for customers to enhance their equipment down the road as their mining requirements grow.

Epiroc's blasthole drills are designed for safety, productivity and reliability for rotary or DTH drilling applications. Enhancing profitability for customers' businesses and offering advanced performance, Epiroc blasthole drills are your drilling solution.

How to Test Sand Content During Well Development

use this sep-by-step guide for success in water well development and mining

Testing sand content during groundwater well development is crucial for ensuring the efficiency and longevity of water wells. A simple yet effective method to assess sand content involves using an Imhof cone and a five-gallon bucket and assessing sedimentation at various stages of the

aquifer test. This article provides a step-by-step guide for water well drillers and owners on accurately testing sand content. Step-by-Step Guide to Testing Sand Content

1. Begin with Initial Sampling: Start your testing within the first 10 to 15

minutes of pumping during the aquifer test. This initial sample is crucial as it provides an immediate sense of the sediment levels that the well is producing before any significant settling or changes occur due to prolonged pumping.

2. Schedule Further Sampling: Plan to take additional samples at strategic times throughout the aquifer testing process. A typical schedule might look like this:
 - 25% into the testing period
 - 50% into the testing period
 - 75% into the testing period
 - Just before ending the test (between 5 to 10 minutes before shutdown)
3. Use Standardized Equipment: While an Imhof cone is a widely recognized tool for measuring sediment content, alternative methods like a five-gallon bucket can also be effective, especially for visual reference. After settling, if you notice sand accumulation at the bottom approximately covering a dime's area, this generally indicates a sand content of at least 10 parts per million.
4. Graph and Average Results: Graph

the results of your samples to visualize the sediment content trend over time. Averaging these results can help determine the overall sediment load during the test. The American Water Works Association (AWWA) suggests that sediment content should ideally be less than five parts per million.

5. Consider the End-use of the Water: If the water from the well is intended for sensitive uses such as brewing craft beer, cold brew coffee, or kombucha, strive for even lower sediment levels—typically under one part per million.
6. Collaborate with Experts: For larger-scale projects, it's advisable to work closely with hydrogeologists and design firms to tailor the sand content testing and well design optimally. This collaboration can help address specific challenges such as high turbidity or unique sediment sizes that might not be effectively captured by standard methods.

Incorporating Sand Content Testing in Mining and Mineral Exploration

While this guide focuses on

groundwater wells, the principles of sand content testing are also applicable to mining and mineral exploration in the United States. Accurate sediment analysis can help in assessing the environmental impact and sustainability of mining operations. Additionally, understanding sediment content can guide the selection of appropriate machinery and techniques for mineral extraction, ensuring safer and more efficient operations.

This straightforward approach not only helps in maintaining the quality and sustainability of water wells but can also be adapted to enhance mining and mineral exploration projects. By implementing rigorous testing protocols, both industries can achieve greater productivity and environmental compliance.

Look 20 Years into Groundwater's Future

Bigger Wells, More Treatment, Potential Changes

Let's indulge in a little sci-fi for a moment. What does the water well industry look like in 20 years? I'm going to predict the industry in 20 years will be, um, interesting. First, three bullets for the next two decades, then a bit about how each affects the industry and the contractors working in it.

Groundwater becomes harder to get.

The relative difficulty drives up the cost (and perhaps risk).

The groundwater we do get can be of lower quality.

A recent The New York Times survey put

together a massive, 80,000 well database. Well after well show an overall, decades-long decline in groundwater levels. That means more service work. Setting pumps deeper where possible. Bigger, more powerful pumping and control systems. Bigger holes.

That slides nicely into the second point: Wells to get deeper water cost more to install. When it comes to that point, they're more valuable to the client too. Maybe a shallower well failed. Maybe a shallower well that should have produced didn't. A farm or housing project's success may depend on the work done by drillers in the field.

This has pros and cons. Bigger jobs often have bigger rewards. Bigger jobs often put contractors through more hoops, from regulatory to insurance, too. Clients, whether you're the prime contractor or plugging into a bigger project, want to know you can handle the execution and manage the risk involved. Clients may also have specific asks: specifying a certain drilling method, fluids type or PVC casing.

My third point dovetails with a recent report from the U.S. Geological Survey. The USGS collated data from 2,200 wells, with detailed reporting on each every 10 years from 1988-2021. More than

half the sites reported higher salinity levels over time. Potential reasons differ. In the Northeast and Midcontinent, we can consider heavier road salt use in the winter. In the West, we might talk about irrigation. Regardless of the source, USGS sees higher salinity in many areas.

(And that's before we even talk about forever chemicals like PFAS ...)

If this continues, what does it mean for groundwater professionals? People aren't going to stop needing water. However, the folks providing groundwater need to:

Prepare to do bigger holes and bigger projects.

Ensure durable, corrosion-resistant materials.

Become expert resources in water quality and treatment.

The stretch to do bigger projects and diversify into related offerings are at the heart of innovating in the water well space. What the water well industry looks like in 20 years is really up to the people in it now. Are you sharing your knowledge and innovations to propagate good decisions about materials and methods across the industry? Are you talking up good manufacturers and supply houses so they continue to be around for your industry mentees?

The challenges for water supply and demand will only get more complicated as we try to support more and more people on the planet. What remains simple is the groundwater industry's commitment to being part of the solution to these challenges for generations to come.

Geoprobe® 31 Series Drilling Rig

From eliminating the need for a Class A/B CDL to reducing the need to handle components, customers have found features on the Geoprobe® 31 series rigs give them an advantage in conquering the complexities of today's labor market. Power and versatility: effectively compete in multiple revenue streams – HSA, SPT, CPT, DPT, rock coring, mud rotary, air rotary, and drive and wash Centerline head side shift: aligns all head functions and winches over the bore hole without moving the drill mast for

efficient drilling.
Simple controls with hands-free rotation, head feed, and auto drop hammer: makes work nearly effortless and creates a gentle learning curve for the seasoned driller as well as the new hire

Drilling Today Launching ROCK TOOLS DIRECTORY-2024

Drilling Today dedicated to the Drilling, Mining & Construction Industries where in Excavation is the primary part and also very well documented both in the domestic markets and across the world since 1999. Moreover, having connected with its dedicated subscribers the advertisers as well as the end users who are enjoying awesome benefits. Over the years the Advertisers & Subscribers are encouraged with abundant consequential benefits for being part of the Drilling Today Magazine.

Drilling Today having started its successful journey since March'99 though with some negligible errors but with its target driven & time demanding approach later worked closely like a bridge between the segments to connect the manufacturers, traders with the end users through its online promotion process for delivering optimal benefits. The advertisers and the Subscribers were appraised with the progressive, restructured developments in the drilling industry with its E-portal which will now benefit with not only the enquiries but also directly with confirmed orders. Drilling Today under its unending progression to support the Rock Tool manufacturers, Distributors and Traders are now coming out with the ROCK TOOLS DIRECTORY 2024 – A Rig Owners Encyclopedia, published once in 5 years and this time with 2024 precisely select profiles which is going to be a one of its kind trade journals for the first time and will not only be circulated in India but also across the world. The directory circulation is expected to exceed over 5 Lacs elite target audiences of this industry resulted from the Participation in Trade Shows & Exhibitions at America, China, Europe and Africa which will bring-in results beyond comparison. Drilling Today now specially inviting and requesting one and all for an enthusiastic backing in this endeavor to get connected with the Rest of the world for its rich paybacks.

Sullair Releases Next-Generation E1035H Electric Portable Compressor

Sullair has introduced its next-generation E1035H electric portable compressor, designed to help save fuel costs while reducing customers' carbon footprint. A 250-horsepower totally enclosed, fan-cooled (TEFC) motor with an auto lubrication system gives the E1035H equal power and efficiency to similar-sized diesel-powered compressors, the company says. It produces 1,035 cfm at 150 psi, and Sullair's proprietary Electronic Spiral Valve (ESV) provides high efficiency with up to 60% turndown. Because of its emission-free design, it can be used indoors and wherever a 60 Hz power source is available. It also touts quiet operation, added safety features and a lower total cost of ownership than diesel compressors. The E1035H is Sullair's first compressor to feature swing-out coolers. This patent-pending design allows users complete access to the front and back coolers for more thorough cleaning, which helps keep the compressor running optimally, the company says. Additionally, the E1035H offers condensate management technology, reducing the need for additional equipment to dispose of condensate. In-depth compressor and package performance information can be found on the 7-inch Sullair Touchscreen Controller. The Sullair AirLinX telematics helps protect the unit from theft and provides important machine data, remote monitoring and troubleshooting. Sullair says the new product is the next step in its commitment to a carbon-neutral value chain and aligns with Hitachi's long-term environmental targets. The initial development of the E1035H was driven by hands-on input from Sullair customer Ring Power Corporation. "The development of the E1035H is the beginning of a new era for Sullair in driving industry-leading solutions that bring enormous value to our customers while promoting environmentally responsible innovations," said John Randall, president and CEO of Sullair. "The future of our industry – and our planet – depends on all of our commitment to investments in green technology. Our customers are expecting that commitment, and we are proud to play our part in the fight against climate change."

DTH HAMMERS

BUTTON BITS MINING TOOLS &
DRILLING EQUIPMENT

PRECISION
TOOLS FOR
EARTH'S HIDDEN
TREASURES

DTH Hammers

- Higher end consistent penetration rate
- Avoidance of back hammering
- Hammer blocking
- Durability
- Corrosion and chemical resistance
- Withstanding capability at the range of higher pressure

DTH Button Bits

We bring forth premium Button Bits for our esteemed customers keeping in mind their demands.

These Products are manufactured using high grade materials and ensure first class range.

Product Range

- DTH Hammers (3-12 inches)
- DTH Button Bits (3-18 inches)
- DTH Over Burden Bits (4-14 inches)
- Drifter Bits
- Retract Bits
- Cluster Hammers
- Rock Roller Bits / Tricone Bits

Jain uPVC-Casing, Screen & Column Pipes

Casing & Screen Pipes

- Anti-Corrosive. PVC being an inert material, most of the chemicals found in soil and water do not affect the pipe.
- Continues outside Ribs increase permeability by keeping gravel pack away from slot.
- Chemical rehabilitation possible when choking occurs due to encrustation.
- Horizontal slots enable laminar flow into the well reducing well entrance losses. and no sand pumping.
- Higher permeability reduces draw down and results in saving in pumping energy.
- Right choice of Slot width 0.2mm to 3.00mm according to aquifer particle size.
- Light in Weight. Easy to install.
- The socket and spigot with suitable thread require no welding equipments and generator for jointing.
- Manufactured conforming to IS:12818, DIN 4925 (part I to III) and ASTM F480 & Company Standard.
- All accessories available for well completion.
- Wide size range 1.25" to 24" dia.

Column Pipes

- The product is produced with high impact modifier.
- The compound is tested safe for potable water application.
- Smooth inner wall, no scale buildup or erosion.
- Efficient pumping due to low friction loss - Resulting in energy saving upto 20%.
- Joint is designed with special anti rotational lock at both the ends.
- 100% leak proof joint.
- Light in weight, easy to handle, transport and install.
- Easy and quick - assemble / dis - assemble system with no external tools.
- Complete range of column pipe, fittings & accessories are available in stock.
- Jain sure-loc plus : 1.25" TO 8", in sch 80 and sch120.
- Jain thread loc plus : 1" to 4" in V4, Copper, Bronze, Silver, Gold, White Gold, Diamond, Platinum series.

Best Choice for any Quality of Water & Soil

Develon Launches HB-Series Breakers for Excavators

Develon, formerly known as Doosan Infracore, has expanded its attachment offering with its HB-Series hydraulic breakers, the HB06H and HB15FH, in North America.

Engineered for high performance, the new breakers have a simplified design that allows for easier maintenance and use in a variety of demolition, mining, and general construction applications, the company says.

The company says the breakers' are enhanced through an advanced heat treatment process and the use of quality materials for key components, such as the cylinder and piston.

"The HB-series breakers provide the highest possible productivity, whether the excavator operator is breaking concrete or rock," says Jacob Sherman, product and dealer

marketing manager at Develon.

In operation, the energy of the piston stroke is collected by charged nitrogen gas, and the Develon breakers use an inward valve system with a simple structure and fewer internal parts. In addition, a urethane damper prevents vibrations that can damage the breaker. The front head supports the breaker and assemblies with a bushing, which absorbs the impact of the tool.

According to the company, the low-noise housing is ideal for excavators working in urban areas where noise levels must be controlled or where local regulations require damped breakers.

The HB06H and HB15FH, which are backed by a one-year warranty, are compatible with the DX62R-7 and DX63-7 mini excavators, the

DX140LC-7 and DX140LCR-7 crawler excavators, and the DX140W-7 wheeled excavator.

The HB06H is designed for machines with hydraulic flow of 10.5 to 18.5 gallons per minute. It weighs 750 pounds and delivers 500-900 blows per minute.

The HB15FH requires 21.1 to 29.1 gallons per minute of flow. It weighs 2,129 pounds and delivers 350-700 blows per minute.

To ensure performance, the company says it is important to select the appropriate chisel (moil point, pyramidal, wedge, or blunt) based on the application.

Moil point — Demolition, hard ground, or concrete.

Pyramidal — Concrete and tough rock, asphalt, and trenching or excavation.

Wedge — Trenching, general excavation, concrete breaking.

Blunt — Block splitting, compact abrasion, boulder, or slab breaking.

Compact Equipment Manufacturer Bobcat at World of Concrete Company Plans to Feature New Portable Power Lineup

FuelPro Trailers Releases New Diesel Support Trailer
Company says FuelPro 990 Designed for Remote Refueling
Compact equipment manufacturer Bobcat plans to showcase a range of new and updated products at the upcoming World of Concrete 2024, Jan. 23-25 in Las Vegas, the company announced in a release. The lineup on display in booth C5347 in the Central Hall at the Las Vegas Convention Center will range from portable power units to compact excavators.
The company says one major focus is the latest addition to its compact excavator lineup, the E40. Bobcat says the E40, launched in September 2023, gives operators "high performance, fast cycle times and optimal maneuverability." The company adds that the excavator has a minimal tail swing, with less than two inches of overhang and a standard long arm.
It calls the E40 "ideal jobsite solution for those who demand leading performance and the maneuverability to complete challenging work in confined jobsites." The excavator also takes a range of attachments.
The company also plans to exhibit its newest offering, a portable power lineup rebranded under the Bobcat name, including the PA185v portable air compressor and PG25 portable generator.
Headquartered in West Fargo, North Dakota, Bobcat offers an wide line of compact equipment, including loaders, excavators, compact tractors, utility products, telehandlers, mowers, attachments and implements, as well as parts and services. In 2024, the company plans to expand with the addition of portable power, industrial air, industrial vehicle and turf renovation equipment offerings. The Bobcat brand is owned by Doosan Bobcat Inc., a company within the Doosan Group. For more information, visit www.bobcat.com.

Global Wagon Drills Market By Type (Hydraulic Drills, Pneumatic Drills), By Application (Mining Industry, Water Well Drilling Industry), By Geographic Scope And Forecast

The Wagon Drills Market size is expected to develop revenue and exponential market growth at a remarkable CAGR during the forecast period from 2023–2030. The growth of the market can be attributed to the increasing demand for Wagon Drills owing to the Mining Industry, Water Well Drilling Industry, Others Applications across the global level. The report provides insights regarding the lucrative opportunities in the Wagon Drills Market at the country level. The report also includes a precise cost, segments, trends, region, and commercial development of the major key players globally for the projected period.

The Wagon Drills Market report represents gathered information about a market within an industry or various industries. The Wagon Drills Market report includes analysis in terms of both quantitative and qualitative data with a forecast period of the report extending from 2023 to 2030. The report is prepared to take into consideration various factors such as Product pricing, Product or services penetration at both country and regional levels, Country GDP, market dynamics of parent market & child markets, End application industries, major players, consumer buying behavior, economic, political, social scenarios of countries, many others. The report is divided into various segments to offer a detailed analysis of the market from every possible aspect of the market.

The overall report focuses on primary sections such as – market segments, market outlook, competitive landscape, and company profiles. The segments provide details in terms of various perspectives such as end-use industry, product or service type, and any other relevant segmentation as per the market's current scenario which includes various aspects to perform further marketing activity. The market outlook section gives a detailed analysis of market evolution, growth drivers, restraints, opportunities, and challenges, Porter's 5 Force's Framework, macroeconomic analysis, value chain analysis and pricing analysis that directly shape the market at present and over the forecasted period. The drivers and restraints cover the internal factors of the market whereas opportunities and challenges are the external factors that are affecting the market. The market outlook section also gives an indication of the trends influencing new business development and investment opportunities.

Wagon Drills Market Size And Scope - Verified Market Reports
Market Evolution
This section provides an analysis of the position of the product or services in the market based on market development and competitive position. It provides an overview of the stages of product growth in the market in the terms of early (historical) phase, middle phase, and future innovation and technologies.

Porter's Analysis
Porter's five forces framework provides a blueprint for understanding the behavior of competitors and a player's strategic positioning in the respective industry. This section evaluates the different external factors that will impact competitive position over the coming years. This will be analyzed through 5 main factors such as:

- Competitive Rivalry
- Threat of New Entry
- Threat of Substitution
- Supplier Bargaining Power
- Buyer Bargaining Power
- Value Chain Analysis

Value chain allows businesses to observe their activities and find competitive opportunities. This section provides the analysis from suppliers to

end consumers through manufacturers and intermediaries of a specific commodity or service. This will help the company's business activities to see how the company can create a competitive advantage for itself.

Pricing Analysis
This section provides an analysis on historical and projected pricing trends of the product which helps in determining the product's price and/or services beneficial for companies product lifecycle. This section includes qualitative as well as graphical analysis of price strategy which helps both businesses and consumers to evaluate goods

Wagon Drills Market Scope Of the Report
This report offers past, present as well as future analysis and estimates for the Wagon Drills Market. The market estimates that are provided in the report are calculated through an exhaustive research methodology. The research methodology that is adopted involves multiple channels of research, such as – primary research, secondary research, and subject-related expert advice. The market estimates are calculated based on the influence of the current market dynamics along with various economic, social, and political factors on the Wagon Drills Market. Also, various regulations, government spending, and research and development growth define the market data. Both positive, as well as negative changes to the market, are taken into consideration for the market estimates.

Wagon Drills Market Competitive Landscape & Company Profiles
The market report lists the major players involved in the Wagon Drills Market under the competitive landscape and company profile chapters. The major players in the market are evaluated based on their product and/or service offerings, financial statements, key developments, strategic approach to the market, position in the market, geographical penetration, and other key features. The chapter also highlights the strengths, weaknesses, opportunities, and threats (SWOT analysis), winning imperatives, current focus and strategies, and threats from competition for the top three to five players in the market. Furthermore, the list of companies included in the market study can also be customized as per the client's requirements. The competitive landscape section of the report covers details in terms of the top five company's ranking, key developments such as recent developments, partnerships, mergers and acquisitions, new product launches, etc., the company's regional footprint, and company industry footprint as per the market and Ace matrix.

Company Regional Footprint
This section provides geographical or regional level reach or their sales network presence for each of company's considered for profiling.

Company Industry Footprint
This section provides the cross-analysis of industry verticals and market players that gives a clear picture of the company landscape with respect to the industries they are serving their products and services.

Ace Matrix
This section provides company benchmarking into Active, Cutting Edge, Innovator, and Emerging based on their product and business strategy. In Which, product strategy includes

parameters such as Breadth & Depth of Product, Focus on Product Innovation, Product features & functions, Scalability whereas business strategy includes parameters such as geographical reach, Industry Coverage, Inorganic Growth, and Roadmap.

Key Players in Wagon Drills Market
The Wagon Drills Market Report delivers an in-depth analysis of leading and emerging players in the market. The Report provides comprehensive lists of key companies which have been enlisted on the basis of type of products they are offering & other factors in Market. Among company profiling market analysis, the analysts who worked on the report gave the year of market entry for each mentioned player can be considered for the research analysis.

The "Global Wagon Drills Market" study report will provide a valuable insight with an emphasis on the global market including some of the major players such as Jupiter Rockdrills, Iesme, Kalarigs, KRD Industries, Anand Autotrade, Teksomak, PHEL.

Mendiger Basalt relies on Epiroc HB 7000 with full-service rental agreement

Since 2012, Mendiger Basalt Schmitz Naturstein GmbH & Co. KG has been using Epiroc hydraulic breakers in its Basalt quarry in the Eifel region, Germany, for primary breaking. Now, the company is modernizing its fleet with an Epiroc HB 7000 equipped with the HATCON™ fleet management system. Mendiger Basalt is opting for a full-service rental agreement for the first time, covering the equipment's maintenance, wear parts and consumables such as chisels and lubricants.

The breaker was handed over by Epiroc Business Partner A.B.T. Abbruchtechnik GmbH, which, through years of collaboration with Epiroc, possesses in-depth expertise in handling Epiroc

attachments, especially in heavy-duty applications. The rental cost is calculated based on the actual operating hours recorded by the HATCON™ system from Epiroc.

"This combination provides optimal planning security for both companies and enables extremely reliable scheduling of maintenance, leading to very high availability of the attachment and a reduction in

downtime costs," Marvin Venker, Managing Director of A.B.T. Abbruchtechnik, during the handover of the hydraulic breaker. Excavator attachments versus drilling and blasting For some time now, Mendiger Basalt has been using excavator attachments instead of the usual drilling and blasting method, bringing several advantages to the operation. The blast-free extraction results in significantly lower noise

and environmental impact compared to traditional methods, greatly enhances workplace safety, and allows for quarrying despite nearby residential areas. Extensive closures and associated work interruptions are eliminated, enabling simultaneous work in multiple areas of the quarry. Additionally, the use of hydraulic tools supports the extraction of high-quality material directly and precisely, even in heterogeneous rock. "Due to the interplay of all these factors, the cost of using hydraulic breakers is not significantly higher than conventional blasting operations," summarized Rainer Krings, Managing Director of Mendiger Basalt Schmitz Naturstein GmbH & Co. KG. Robustness and top-class efficiency The heavyweight Epiroc hydraulic breakers, the HB series, are specifically designed and developed for toughest operations such as primary breaking and secondary breaking in quarries or demolition of massive reinforced concrete structures. "The perfect tool to effortlessly extract and crush Basalt, an extremely hard volcanic rock," concluded Rainer Krings. The patented Intelligent Protection System (IPS) facilitates positioning and provides maximum protection against blank firing by automatically adjusting the on/off behavior during operation. This ensures maximum efficiency with minimal risk even under challenging conditions. The overall performance is optimized by the integrated AutoControl system, automatically adjusting impact energy and frequency during operation to be in sync with each other.

KupiTools

Manufacturers and Suppliers of : Electro Plated Diamond Wheels (Button Grinding Wheels)

DESCRIPTION :

Specialists in :

- BORE BIT BUTTONS - Radius, Spherical, off Round, OD Remer Size

RDS ENGINEERING
Breaking Ground,
Setting Standards.

RDS AUTO SPT HAMMER

TECHNICAL SPECIFICATIONS
Geotechnical Testing Equipment as per ISO 22476-3:2005
Hammer drop height : 760mm, 76cm, 30 inches
Hammer piston weight : 63.5kg, 140lbs
Blow per minute : 10-30 Adjustable System
Energy test ratio (ETR) : 67%-80% Adjustable System
SPT Assembly : SPT Sampler, SPT tube, SPT shoe
SPT anvil Connection : AW/Customize

BEBEFITS
Easy to upgrade your Existing Rig (Water Well to upgrade Geotechnical Drilling)
Tests with high reliability and accuracy (63.5 kg x 760mm drop) (140 lbs x 30" drop)
Safety: the hammer's casing contains all the working parts.
Can be applied to most rigs
Accuracy results in R-value and SPT test, SPT Test
