THE NAME OF Trust....

COMPANY PROFILE

We Are One Of The Leading Manufacturer And Exporter Of DTH Drilling Rig Machine And Rig Machine Accessories And Spares Across The Globe.

We Have An Excellent Infrastructure Requires For Manufacture Rig Machine. Also For Repairing And Services. With All Latest Machinery That Are Actually Required For Repairing And Services. With All Latest Machinery That Are Actually Required For Manufacturing Drilling Rig Machine, Rig Machine Accessories And Spares.

We Are Sure You Will Find A Rig Machine For Your Application From Our Product Range. If You Have Any Special Requirements, We Have Highly Qualified Teams Of Engineer's And Researchers. Who Can Work On Our Requirements And Give You The Best Solution Or Machine.

We have Exported DTH Drilling Rig Machine Rig Machine and Rig Machine Accessories And Spares To Different African Countries, UAE, Austraila, Nepal, etc.

MR. PANKAJ PATEL | MR. SANDIP PATEL

OUR VISION :

Is To Become The 'partner Of Choice' And Set Standards That Acknowledged As 'best-in-its-class', Delivering True Value To The Socity. We Apire To Reach And Retain Our Position Amongst The Top Three Companies And Be The Leading Brand, With In The Next 10 Years, In The Industry We Operate In.

OUR MISSION :

Is To Rapidly Grow Our Business Into A Dominate Position In Our Product Segment, An A Sustainable Basis And Vases On The Core Principles Of Customer Focus, Excellence Of Our Rigs, Motivated Workforce And The Speed Of Our Response.

DRIVEN BY POSSIBILITY™

YOU KNOW THE DRILL. SO DO WE.

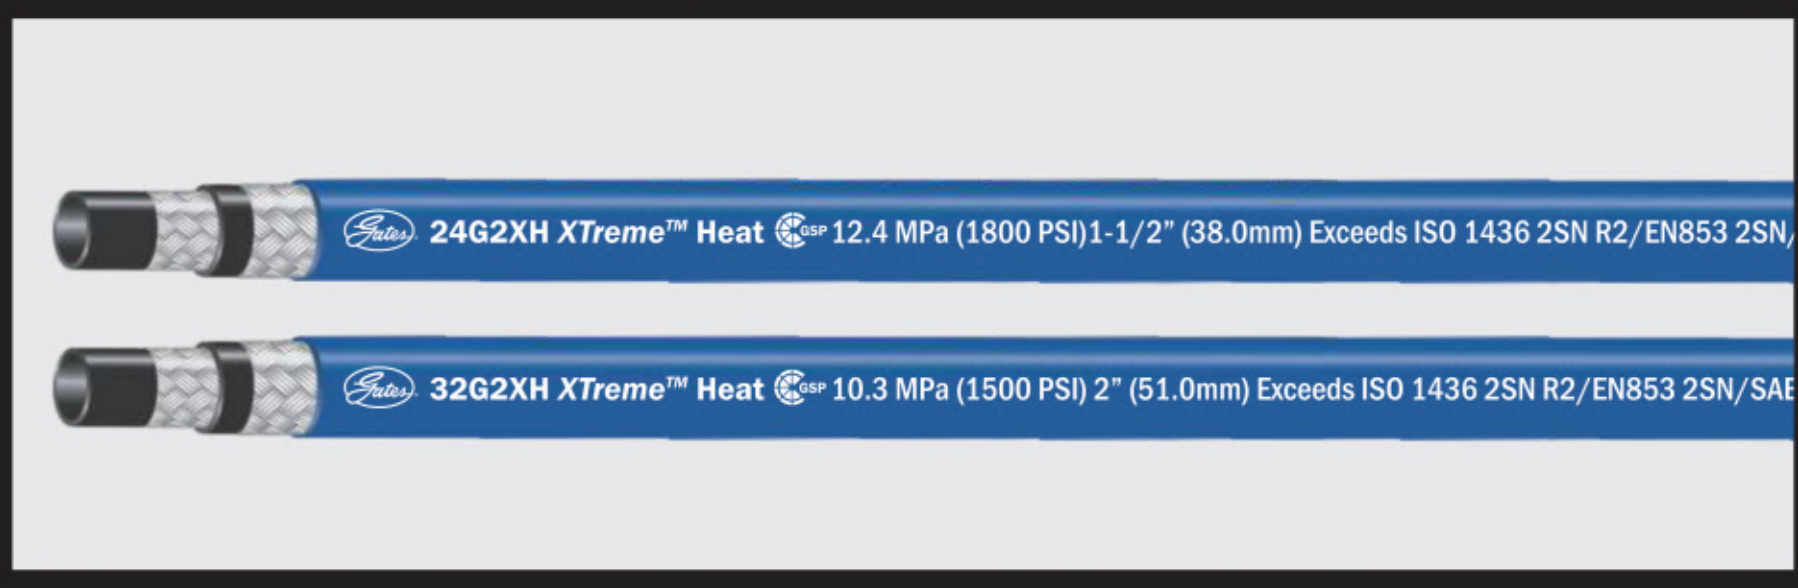
Gates innovative solutions can be found on virtually every part of a water well drilling rigs, and the equipment that supports operations. From top drives to mud pumps, and everything in-between, our team of industry experts and product engineers design, test, and manufacture Gates solutions that are trusted to power your most complex pumping and hydraulic equipment under the most demanding conditions.

G2XH XTREME™ HEAT HOSE

- Long life oil resistant tube
- 2 wire performing hose
- Abrasion resistant robust cover
- MSHA “2G” approved cover
- More flexible
- Pin pricked cover

Recommended for pressurized oil/air compressor delivery lines, specially designed for water well rig application.

Working Pressure: 1800 PSI (-24) & 1500 PSI (-32)
Temperature: -40°C to +149°C



DRIVEN BY POSSIBILITY™

G2XH XTREME™ HEAT HOSE

- Long life oil resistant tube
- 2 wire performing hose
- Abrasion resistant robust cover
- MSHA "2G" approved cover
- More flexible
- Pin pricked cover

Recommended for pressurized oil/air compressor delivery lines, specially designed for water well rig application.
Working Pressure: 1800 PSI (-24) & 1500 PSI (-32)
Temperature: -40°C to +149°C

MXT™ WIRE BRAID HOSE - SAE 100R16

More flexible with up to 40% lower force-to-bend for faster and more ergonomic installation.
Temperature Range: -40°C to +100°C

MEGASYS™ MXG™ 4K SAE 100R12

Lightweight, highly flexible, and qualified to ONE MILLION impulse cycles.
Temperature Range: -40°C to +121°C

MINE MASTER™ AIR DRILL HOSE

Recommended for Heavy duty, high pressure use on Industrial construction & pneumatic mining applications.
Temperature Range: -32°C to +82°C

AIR-WATER HOSE

For all air and water applications requiring maximum flexibility in engineering industry, workshops, shipyards, irrigation etc.
Temperature Range: -30°C to +82°C

FLEXMORE HOSE

For High pressure Hydraulic lines
Working pressure: 3600 PSI
Temperature Range: -40°C to +100°C

G1 1-WIRE BRAID HOSE - SAE 100R1

For Medium pressure hydraulic lines, Meets performance requirements of EN 853 1SN.
Temperature Range: -40°C to +100°C

G1 H HIGH TEMP 1- WIRE BRAID HOSE

For Medium pressure hydraulic oil lines, Meets or exceeds the performance requirements of SAE 100R1 Type AT
Temperature Range: -40°C to +135°C

4XH SPIRAL WIRE HOSE

For High pressure and high impulse applications. Most flexible EN 856 4SH hose in the industry.
Temperature Range: -40°C to +100°C

4XP SPIRAL WIRE HOSE

For Extremely high-pressure and high impulse hydraulic applications. Most flexible EN 856 4 SP hose in the industry.
Temperature Range: -40°C to +100°C

Editorial:
Drilling Today Launches the Global Drilling & Mining Rig Owners Directory – Part 1

Game-Changer for Manufacturers, Exporters, and Traders in the Drilling & Mining IndustryThe drilling and mining industry thrives on efficiency, connectivity, and access to reliable information. Recognizing this critical need, Drilling Today proudly announces the launch of its Drilling & Mining Rig Owners Directory – Part 1, a revolutionary global resource that brings together 15,000+ highly informative records of drilling rig owners and mines equipped with drilling rigs across more than 100 countries.This comprehensive global directory is designed to serve as a bridge between manufacturers, traders, exporters, and end-users by providing verified and up-to-date information on key players in the industry.Why This Directory is a Must-Have for Industry Players?The Drilling & Mining Rig Owners Directory is not just a listing—it is an industry-first initiative that facilitates seamless business connections. Whether you are a manufacturer looking for direct buyers, a trader searching for new business opportunities, or an exporter expanding into new markets, this directory will be a powerful tool for your growth.Key Features of the Directory

• Massive Global Coverage – This directory features rig owners from over 100+ countries, making it one of the most extensive databases in the drilling and mining industry.

•15,000+ Verified Entries – Every entry is carefully curated and includes valuable data on rig owners, drilling rigs, and mining operations.

• Access to Domestic & International Markets – Manufacturers and exporters can now connect directly with end-users from around the world, facilitating faster transactions and business expansion.

• Easy Navigation & Structured Data – The directory is organized efficiently, making it simple for businesses to find relevant contacts based on geography, industry, and rig type.

• Regular Updates & Accuracy – Drilling Today ensures that the directory is continuously updated to maintain data accuracy and relevancy.Benefits of Advertising in the DirectoryThe Drilling & Mining Rig Owners Directory offers unparalleled marketing opportunities for manufacturers, exporters, and service providers in the drilling and mining industry.1. Direct Access to Decision-MakersUnlike generic directories, this specialized publication directly reaches rig owners, mining operators, and drilling contractors—the key decision-makers who influence equipment purchases and contracts.2. Expand Your Global ReachFor manufacturers and exporters, this directory provides a direct route to international markets, eliminating middlemen and streamlining business operations. It's an ideal platform to showcase your products and services to global buyers.3. Generate High-Quality LeadsWith over 15,000+ verified listings, companies can connect with genuine buyers and potential partners who are actively involved in drilling and mining operations. This enhances the chances of closing profitable deals.4. Cost-Effective Advertising with High ROIUnlike traditional marketing channels, advertising in the Drilling & Mining Rig Owners Directory provides targeted exposure to the right audience. Every advertisement reaches businesses and individuals actively seeking drilling solutions, ensuring a high return on investment (ROI).5. Increased Brand VisibilityBy featuring your company in the directory, you establish strong brand credibility in the industry. Your company will be associated with a trusted and widely recognized resource, strengthening your brand's reputation.6. Stay Ahead of CompetitorsIn an industry where competition is intense, early adopters of this directory will gain a strategic edge by securing prime advertising space and direct access to high-value clients bef…

Innovative Excavation System Introduced by Toku America

The global excavator breaker market is projected to grow significantly to an estimated $3.5 billion by 2032.

With increased construction activities worldwide, rapid urbanization, and an expanding mining sector, the global excavator breaker market is projected to grow significantly to an estimated $3.5 billion by 2032.

As a result, hydraulic breaker technologies in mining and aggregate applications have evolved rapidly to include advancements that are focused on optimizing breaking efficiency, reducing operating costs, and minimizing downtime on the job.

In an effort to deliver maximum performance and reliability options for this growth trajectory, Toku America, Inc. (TOKU: A Subsidiary of Toku Pneumatic Co. Ltd. Japan), has recently developed its STRIKER Rock Breaker System comprised of Heavy Duty, Mid-Range, and Mobile system options. The efficient and robust systems feature a versatile boom that allows the powerful hydraulic breaker to reach into the crusher's mouth–effectively reducing oversized boulders and clearing any blockages in the hopper.

By incorporating TOKU's STRIKER Rock Breaker Systems, mines and quarries around the world can significantly improve safety, productivity, and profitability in their crushing operations. All systems are custom engineered to meet specific crusher and aggregate material application demands in a wide range of sizes and reach– Nominal Max Horizontal Reach FT (M), Max Horizontal Reach FT (M), and Max Vertical Reach FT (M).

Toku America / Rock Breaker System Models:

Heavy Duty Rock Breaker: Essential for permanent rock breaking in demanding environments, these systems provide the safest solution for managing bridging, material build-ups, and oversized rocks.

· Maximizes the hydraulic hammer's performance potential.

· Shock-absorbing pedestal mount improves stability.

· Advanced control system ensures safety and reliability while remaining user-friendly.

· Constructed from high-strength steel alloys–ensuring durability and resistance to torsion and buckling.

· Durable, heavy-duty hydraulic cylinders enhance productivity over extended periods.

Mid-Range Rock Breaker: Designed to strike an optimal balance between lightweight construction and high capacity. The boom pedestal's larger footprint enhances stress distribution and strengthens the foundation structures. Generally installed above the opening of a primary crusher.

· User-friendly remote controls for smooth and agile operation.

· Shock-absorbing pedestal mounting.

· Heat-treated conical pins.

· Anti-lunge cushioning in the hydraulic system.

· Unrestricted visibility from the cabin or the operator stand.

· Easy assembly with safe, quick, and straightforward operation.

Bile Rock Breaker: Compact design ideally integrated into portable crushing plants–attaching directly to the mobile crusher's structure. By clearing bridged rock and breaking oversized materials in the hopper (without the need to halt operations or reposition equipment), these versatile boom systems can boost productivity by up to 30%.

· Fits within transport dimensions.

· Crafted with precision from high-quality materials.

· Turntable-mounted base.

· Heat-treated conical pins.

· Low-profile height and width design–efficient use of space.

· Stable and easy to install.

Toku America/Hydraulic Breaker:

Installed at the end of the boom system, TOKU's STRIKER TNB hydraulic breakers feature a uniquely simple yet efficient design with only two moving parts–requiring no maintenance. Its advanced "accumulator free" technology delivers exceptional impact energy, long life, and low operating costs. Based on the same design philosophy, it also features a complete range of 15 breakers to match a myriad of demanding aggregate application needs.

Short, Fully Enclosed Tie Rods.

Long-Stroke Piston: The most efficient design for energy transfer and recoil reduction.

Control Valve: "flow through" design reduces hydraulic surge and efficiently controls the breaker operating cycle.

50/50 Piston to Tool Weight Ratio: Efficiently transfers the blow energy into the material and reduces recoil.

Dual Retainer Pins: Correct tool alignment and evens tool wear for longer tool and bushing life.

Cushion Chamber: Each blow is isolated from the carrier and operator–energy recycled and used for the next blow.

Cummins Unveils New B7.2 Diesel Engine for Medium-Duty Trucks

The B7.2 diesel engine is the latest in Cummins' B Series to come under the HELM platform, designed to reduce emissions, increase fuel efficiency and able to be modified to run on alternative fuels.

Cummins revealed its new B7.2 diesel engine for medium-duty and vocational trucks March 5 at the NTEA Work Truck Week in Indianapolis.

The engine delivers a range of 240 to 340 horsepower and 650 to 1,000 pound-feet of torque. It will go into full production for North America in 2027 at the company's plant in Rocky Mount, North Carolina, the company says.

Cummins says it increased the engine's displacement to 7.2 liters, which enables a wider range of torque offerings and increases flexibility for different applications and duty cycles.

The engine is also the latest in the company's B Series to come under the HELM platform, designed to reduce emissions, increase fuel efficiency and able to be modified to run on alternative fuels. HELM stands for "Higher Efficiency, Lower emissions and Multiple fuels" and was launched in 2024 to help customers adapt to future emissions requirements and meet emissions-reduction goals.

"Our customers have used the B-Series engine for more than 40 years and rely on it every day to meet their needs," said Jose Samperio, vice president, North America On-Highway. "It was important that we offer the reliability and performance that they have come to expect, while also creating an engine that is built to last for the future."

The first B Series HELM entry was the B6.7 Octane gasoline-powered engine. The platform has also been brought to X15 and X10 engines.

Cummins says the new B7.2 engine will "serve a variety of medium-duty and vocational applications, including bus, pickup and delivery, utility trucks, refuse, towing and more." It will also meet EPA emissions rules for light- and medium-duty trucks that are scheduled to begin taking effect with model years 2027.

Features available on the engine include:

Automatic engine shutdown and stop-start capable to reduce carbon emissions.

Compression-release engine brake.

Extended oil-drain-interval pan.

Acumen "smart computing hardware," which provides digital connection and access to a range of applications and capabilities, the company says.

Cummins Maintenance Monitor.

"Our B engine is a legend known around the world. We are proud to unveil the newest version, the B7.2 diesel engine, right here in our backyard," said Brett Merritt, vice president and president, Engine Business. "The B7.2 brings the latest technology and advancements to one of our most proven platforms. Combined with the rest of our medium-duty lineup, our customers will have the right engine choices to fit their business needs, with the power and dependability they have come to expect from Cummins."

Danfoss India Expands Reach in Eastern India and Nepal with New Partnership

• Enhanced service and support for customers in Eastern India and Nepal through a stronger distribution network.
• Increased availability of Danfoss' industrial refrigeration products in Bihar, Jharkhand, and Nepal.
• Improved access to energy-efficient, safe, and reliable industrial refrigeration solutions for businesses in the region.
• Chennai, 7.03.2025: Danfoss, a global leader in energy-efficient solutions, has expanded its reach in Eastern India and Nepal by appointing Classical Pumps as its official reseller in Patna for Industrial Refrigeration products. This strategic partnership, facilitated through Beijer Ref India Pvt Ltd., aims to strengthen the availability of Danfoss' industrial refrigeration products in Bihar, Jharkhand, and Nepal, ensuring enhanced service and support for customers in the region.
• Danfoss is renowned for its cutting-edge industrial refrigeration solutions, which play a vital role in ensuring that energy-efficient and safe cooling across industries such as food processing, cold storage, and pharmaceuticals. The company remains committed to innovation and sustainability, offering state-of-the-art technology to meet the evolving needs of its customers.
• Mr Ravichandran Purushothaman, President, Danfoss India, said, "At Danfoss India, we're committed to empowering Indian industries with sustainable and energy-efficient solutions. Our partnership with Classical Pumps marks a significant milestone in our journey, enabling us to provide best-in-class industrial refrigeration solutions to customers in Eastern India and Nepal, while contributing to India's growth story
• Beijer Ref India Pvt Ltd., a leading distributor in the HVAC&R industry, has been instrumental in expanding Danfoss' footprint in the region. Swatantra Gagneja, Managing Director of Beijer Ref India, expressed his enthusiasm for the partnership, stating, "We are delighted to collaborate with Classical Pumps to bring Danfoss' world-class industrial refrigeration solutions closer to our customers. This initiative aligns with our mission to strengthen distribution channels and enhance accessibility."
• Mr. Madhur Sehgal, Head – Danfoss Climate Solutions Sales, India Region, commented, "With growing demand for Industrial Refrigeration solutions in Bihar, Jharkhand, and Nepal, this partnership will allow us to provide best-in-class technology with local support. We are confident that Classical Pumps will play a key role in our expansion strategy while helping our customers get safe, reliable and high quality solutions."
• Classical Pumps, the newly appointed reseller, is a trusted name in the region, known for its commitment to quality and customer satisfaction. The company will ensure seamless supply and service of Danfoss products and grow the Industrial Refrigeration market in the region of Bihar, Jharkhand and Nepal
• Mr. Anand Shroff, Managing Director- Classical Pumps, added, "Partnering with Danfoss and Beijer Ref India marks a new milestone for us. We are excited to bring advanced industrial refrigeration solutions to businesses in this region, ensuring efficiency and reliability. Appointment of re-seller for Bihar, Jharkhand & Nepal the industries will be get technical support, training, energy efficiency and safety-related programmer/products from time to time"
• This expansion reflects Danfoss' commitment to growth in emerging markets, ensuring a strong and reliable distribution network for its industrial refrigeration solutions.
• About Danfoss A/S:
• Danfoss engineers solutions that increase machine productivity, reduce emissions, lower energy consumption, and enable electrification. Our solutions are used in such areas as refrigeration, air conditioning, heating, power conversion, motor control, industrial machinery, automotive, marine, and off- and on-highway equipment. We also provide solutions for renewable energy, such as solar and wind power, as well as district-energy infrastructure for cities. Our innovative engineering dates back to 1933. Danfoss is family and foundation-owned, employing more than 42,000 people and serving customers in more than 100 countries through a global footprint of 95 factories.
• www.danfoss.com
• About Danfoss India
• Danfoss India is an industry leader focused on energy-efficient solutions and is a 100-percent-owned subsidiary of Danfoss Group. Danfoss India serves a wide range of industries that rely on Danfoss products like drives, heating valves, controls & solutions for refrigeration, air conditioning, HVAC, heavy industries, district cooling, hydraulics, fluid conveyance, and underfloor heating applications. Danfoss engineers technologies that enable the world of tomorrow to do more with less. Danfoss India Region is headquartered at Oragadam Chennai. Our focus is to design and innovate products for both India and outside market. Danfoss' nationwide sales and support network, a strong network of channel partners, and over 3500+ employees in India. Mr. Ravichandran Purushothaman is the President of Danfoss in India.

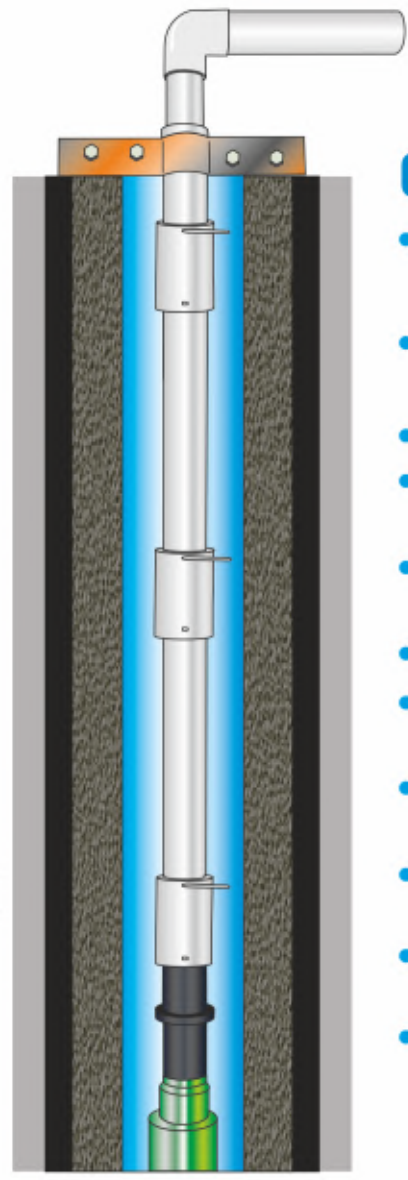
Jain uPVC-Casing, Screen & Column Pipes

Casing & Screen Pipes

- Anti-Corrosive. PVC being an inert material, most of the chemicals found in soil and water do not affect the pipe.
- Continues outside Ribs increase permeability by keeping gravel pack away from slot .
- Chemical rehabilitation possible when chocking occurs due to encrustation.
- Horizontal slots enable laminar flow into the well reducing well entrance losses. and no sand pumping.
- Higher permeability reduces draw down and results in saving in pumping energy.
- Right choice of Slot width 0.2mm to 3.00mm according to aquifer particle size.
- Light in Weight. Easy to install.
- The socket and spigot with suitable thread require no welding equipments and generator for jointing.
- Manufactured conforming to IS:12818, DIN 4925 (part I to III) and ASTM F480 & Company Standard.
- All accessories available for well completion.
- Wide size range 1.25" to 24" dia.



Column Pipes

- The product is produced with high impact modifier.
- The compound is tested safe far potable water application.
- Smooth inner wall, no scale buildup or erosion.
- Efficient pumping due to low friction loss - Resulting in energy saving upto 20%.
- Joint is designed with special anti rotational lock at both the ends.
- 100% leak proof joint.
- Light in weight, easy to handle, transport and install.
- Easy and quick - assemble / dis - assemble system with no external tools.
- Complete range of column pipe, fittings & accessories are available in stock.
- Jain sure- loc plus : 1.25" TO 8", in sch 80 and sch120.
- Jain thread loc plus : 1" to 4" in V4, Copper, Bronze, Silver, Gold, White Gold, Diamond, Platinum series.

Komatsu's new V-series breakers maximize efficiency, lower cost per ton

Any breaker can be designed to hit hard. The trick is to hit hard and efficiently all while conserving fuel and increasing the breaker's survivability and longevity.

That's the program undertaken by Komatsu for its new V-series breakers. With minimal wasted energy and higher operating efficiency, Komatsu's 100-percent hydraulic-fired V-series breakers modulate their impact force and frequency with up to 16 working positions to match most application requirements and maximize productivity while lowering cost per ton.

Komatsu V-series breakers automatically select the best piston stroke length and speed depending on the hardness of the material being broken. By adjusting to either hard material (longer, powerful strokes) or to softer material (shorter, faster strokes), the breakers can achieve high production output, with little wasted impact energy. The breakers are also fitted with an innovative energy-saving recovery valve that drives efficiency. The new breakers are compatible with Komatsu excavators from the PC210 to the PC490.

Automatic greasing and advanced blank firing protection offer guard against damaging dry fires. Swivel hose couplings and heavy-duty housings protect against damage and repairs. Shock-dampening systems in the form of upper and lower suspensions reduce the risk of cracking your excavator booms and breaker housings, while the mounted standard automatic lubrication feature guards against contamination caused by dust and debris.

Vibration control is also important in breaker design and operator comfort. Komatsu's V-series have suspensions with rubber/poly components to help absorb impact and reduce vibrations through the boom. The enclosed sound-dampening housings reduce noise levels compared to open style breakers and offer customers a solution for urban applications.

Because all breakers must eventually be rebuilt, Komatsu supplies inspection kits with the V-series. The inspection kits come with gauges so you can measure wear on all critical components and plan for — rather than be surprised by — maintenance needs.

Montabert Redesigns Variable Speed Breakers for Large Excavators

The three new models get repairable components and new breaker housings that provide enhanced ergonomics, increased safety and greater durability.

The new lineup includes the V47, V57 and V67. Key features include:

- Hydraulic Accumulator: Eliminates the need for onsite nitrogen checks or refills
- TPS System: Increases tool lifespan
- Automatic Energy Adjustment: Breaker autonomously adjusts its striking energy based on material hardness
- For the Operator: Protection against blank firing, automatic lubrication system, energy recovery system and easy maintenance
- For the Carrier: Anti-vibration dampeners, elimination of pressure spikes
- Next-Generation Cradle: Safer, more ergonomic, quieter and more durable

The V57 also gets a cylinder sleeve, which reduces maintenance costs and improves piston guidance efficiency. A Dual Lubrication System on the V67 features two independent circuits to separately lubricate the lower and upper bushings for optimal lubrication.

Quick Specs

V47 (replaces the V45 and V46)

- Carrier Weight: 30-44 tons
- Service Weight: 6,027 pounds
- Striking Frequency: 345-1,160 bpm
- Tool Diameter: 5.9 inches

V57 (replaces the V55 and V56)

- Carrier Weight: 39-66 tons
- Service Weight: 7,921 pounds
- Striking Frequency: 330-1,045 bpm
- Tool Diameter: 6.7 inches

V67 (replaces the V65)

- Carrier Weight: 55-88 tons
- Service Weight: 13,223 pounds
- Striking Frequency: 380-950 bpm
- Tool Diameter: 8 inches

DM450: Versatility, Mobility, and Power in a Small Package

Efficiently complete water well, geothermal loop, or cathodic protection system installations using additional power provided by 450HP Western Star 47X chassis. Carousel can be refilled using back load feature. Enjoy ample space to set casing with 16-inch retractable table. Expanded options include 4.5-inch OD X 10 rod carousel, ladder with integral fall arrestor, and swing-in, down-the-hole hammer holder.

DMR6 TOP HEAD features enhanced durability in the field and simplified serviceability

INCREASED HORSEPOWER to easily mobilize on tough terrain or up hills thanks to 450 HP Western Star 47X chassis with automatic transmission

"We experienced an uptick in efficiency with the DM450. Instead of taking 30 hours per drive, it now takes 22-26 hours. We're cutting drilling time down due to efficiency of the rig," – Keith Parsons, Cathodic Protection Supervisor, C&S Lease Service LLC, Texas Contact Info:

13 Step Plan To Boost Tech Efficiency

Most shop owners believe 100% tech efficiency is the ceiling. But those who follow these 13 steps bill more hours than their techs work—without risking comebacks.

These aren't theoretical methods. They're specific, tested processes that can take shops from 60% efficiency to over 100%.

Here's what drives their incredible results:

- Merit-Based Work Systems: Master the proven methods that motivate techs to produce more without creating tension

- Efficiency Metrics That Matter: Learn which numbers actually drive profit and the common measurements that end up wasting your time

- Strategic Customer Selection: See how far past 100% your team can go. Identify and attract the specific types of clients that make 100%+ efficiency possible

- Performance-Based Pay Structure: Get the exact bonus framework that top shops use to align their techs' motivation with achieving higher profits

100% efficiency isn't the ceiling. It's the starting point. Download the free guide now and implement all 13 steps in your shop today.

More then 35 years of Experience

SUN

Shankar ENGINEERING WORKS

Manufacturer of Centrifugal Pump, Boring Machine Spare Parts.

Turbo pump capacity of drilling well upto 1200 feet
Normal pump capacity of drilling well upto 800 feet

Used in

- Pilling machine
- All type of borwell drilling machine
- Agriculture purpose
- Use Standard fag ball bearing
- Impeller - close type

NEW!

Product Launched

SUN TURBO

Product Description

Material	Cast Iron and Original Stainless Steel
Motor Speed	1450 rpm
Pump Type	Centrifugal Pump
Weight	100 kg maximum
Cooling Method	Air Cooled

WHIZZKID

Mfg of : DTH Hammers, Button Bits Mining Tools & Drilling Equipments

DTH Hammers :
- Higher end consistent penetration rate
- Avoidance of back hammering
- Hammer blocking
- Durability
- Corrosion and chemical resistance
- Withstanding capability at the range of higher pressure

DTH Button Bits :
- We bring forth premium Button Bits for our esteemed customers keeping in mind their demands.

These Products are manufactured using high grade materials and ensure first class range.

Product Range :
- DTH Hammers (3-12 inches)
- DTH Button Bits (3-18 inches)
- DTH Over Burden Bits (4-14 inches)
- Drifter Bits
- Retract Bits
- Cluster Hammers
- Rock Roller Bits/Tricone Bits

JCB's Hydrogen Combustion Engine Approved for Sale in Europe

JCB has announced that its hydrogen combustion engine has been approved for commercial sale and use in machines in Europe, following a landmark ruling from 11 licensing authorities across the continent. Additional countries are expected to follow suit with certification throughout the year.

The engine, which was introduced in January 2023, was designed by a team of 150 engineers as part of a $103 million project. JCB says it is the first construction equipment manufacturer to develop a fully working combustion engine fueled by hydrogen.

JCB confirmed that the Netherlands' Vehicle Authority RDW was the first licensing authority to issue official certification, giving permission for the engine to be sold in the country. Other licensing bodies include Great Britain, Northern Ireland, Germany, France, Spain, Belgium, Poland, Finland, Switzerland and Lichtenstein.

"This is a very significant moment for JCB. To start the New Year with certification in place in so many European countries bodes very well for the future of hydrogen combustion technology," said JCB Chairman Lord Bamford. "JCB has proved in recent years that it is a proper zero emissions solution for construction and agricultural equipment. This formal type of approval/certification paves the way for the sale and use of hydrogen engines right across the UK and Europe. I couldn't have hoped for a better start to the year. Most of all, I am delighted for our team of British engineers who have worked tirelessly to reach this stage."

In 2015, JCB bought a controlling stake in ITM Power, a manufacturer of hydrogen energy systems and hydrogen fuel cells.

Over the past several, JCB has debuted several hydrogen-powered machine prototypes, including a backhoe loader, a Loadall telescopic handler and a 220X excavator, as well as a mobile refueler for the hydrogen-powered machines. The company says it has already produced more than 130 evaluation engines for the machines, which are in an advanced stage of testing on customers' sites.

PHLC32
Fully Automatic Hose Crimping Machine

Technical Specifications

Model	PHLC 32
Crimping Range	1/4" to 2"
Max Crimping Force	100 Tons
Rated Pressure	180 bar
Weight	280 kg
Dies Quantity	8 Nos(1/4", 3/8", 1/2" & 5/8", 3/4", 1", 1.1/4", 1.1/2", 2")
Power & Voltage	415 V 3 Phase, 5 Hp
Scale Accuracy	20 microns
Overall Dimensions	750 x 500 x 840 mm
Tank Size	50 liters
Motor Make	5 Hp Havells / Crompton
Hydraulics (Punp/Valves)	Yuken, Polyhydron

Features :
- Capacity 1/4" - 2" Spiral Hoses crimping.
- 8 Sets of CNC Precise wire cut Dies 1/4", 3/8", 1/2" & 5/8", 3/4", 1", 1.1/4" 1.1/2", 2".
- Automatic & Manual Modes of operation
- Horizontal Alignment.
- Robust Built Which combined best features of Horizontal Crimp technology.
- User friendly operation
- Training on shop floor along with machine.
- Single Source Procurement for HOSES & FITTING at reasonable pricing.

Model PHLC32 Hose Crimping Machine is Mainly used for crimping of high pressure rubber pipe assembly used in Hydraulics. It can also be used for Crimping tow-way bends, especially large bends and irregular shape bends.

The machine features small and portable appearance, big force, low noise and easy to operate. The Crimping can be precise adjusted through a touch screen.

Sandvik introduces iNav total station navigation for tunneling drills

Sandvik Mining and Rock Solutions is introducing iNav total station, the latest solution in automating drill rig navigation for tunneling drills. This new capability is an accurate, more efficient and user-friendly way to determine the position of underground drills in mines or tunnels where GPS is not available.

With iNav total station, the operator can command the total station device directly from the onboard user interface in the drill cabin. The illustrative view displayed on the drill rig interface helps the operator confidently verify that the rig has been positioned accurately before commencing drilling. This new method streamlines operations by enabling the operator to handle the navigation independently, even without prior surveying expertise.

"The introduction of iNav total station will increase productivity and streamline operations by integrating the steps in the navigational process," said Sirpa Launis, Product Manager for Tunneling Drills, Sandvik Mining and Rock Solutions. "Utilizing total station measurement, Sandvik iNav is the most accurate positioning method in underground operations. When we combine iNav navigation and the boom positioning accuracy of Sandvik i-series drill rigs we have a supreme package for efficient, economical excavation."

The total station device is controlled directly from the drill rig via Bluetooth® connectivity and is compatible with Sandvik DrillConnect app. Sandvik DrillConnect enables the easy transfer of fixed-point coordinates directly from the surveyor's computer to the drill's onboard system. It additionally facilitates the transfer of these coordinates to and from other drill rigs in the fleet, ensuring efficient data sharing and operational flexibility.

iNav total station is an optional feature available on Sandvik DT923i, Sandvik DT1132i and Sandvik DT1232i tunneling jumbos and can be retrofitted to units already in operation. The new package includes iNav software and Bluetooth® connectivity and requires a Leica total station, Leica wall prisms and GeoCOM Robotics license for full operation. For further information, please contact:

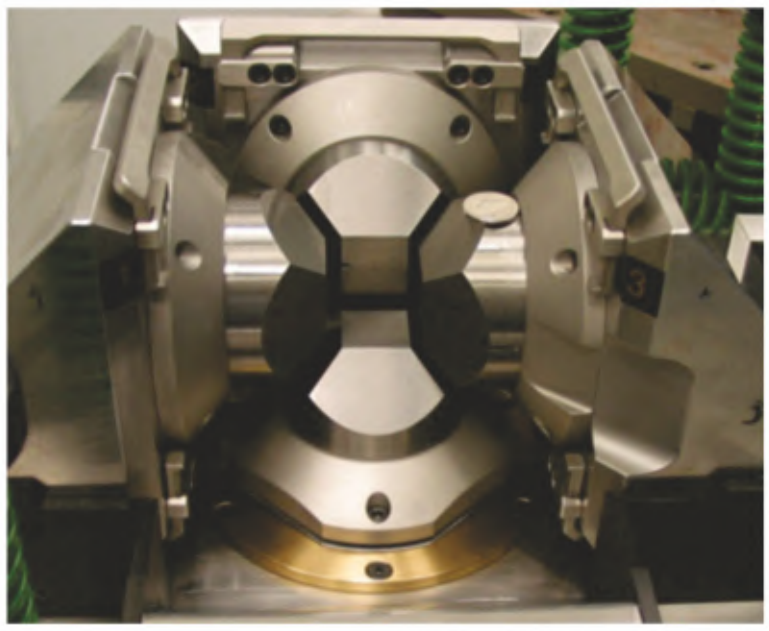
Aussie Made: Perception Matters

AirDrill Hammers and Bits certification cements Schramm's Australian legacy



Schramm AirDrill Hammers and Bits (Wangara, WA) have officially been awarded Australian Made certification by the Australian Made Campaign Limited (AMCL). The AMCL, a not-for-profit company established in collaboration with the Australian Chamber of Commerce & Industry, supports Australian manufacturers and advocates buying Australian goods. It licenses the famous triangular logo it calls "the mark of Aussie authenticity."

Schramm AirDrill H&B joins a network of more than 2600 other certified businesses, strengthening their global profile and cementing their association with Australia. According to Roy Morgan Research, 90% of Australians prefer to buy Australian products, and 99% of respondents recognize the logo, which is now featured on H&B products and sales materials.

The certification effort was spearheaded by Product Development Manager Charles Barden and Workshop Manager Ian Ingham. Charles, who came to Australia in 2009 as a self-described "long haired backpacker," has been working for Schramm since 2016. Ian has been in the industry for 17 years, originally working for AirDrill, which was acquired by Schramm in 2013.

Competitors are moving production overseas because it's cheaper," Ian says. "It seems like everything is made in China these days. But our hammers and bits are made in-house."

"We have pride in our nation and our product," says Charles. "We never cut corners. We use premium materials, we have high quality workmanship, and we have an excellent product."

Australia is the world's leading drilling market. So when the sales team reported hearing rumours that Schramm products were being made overseas, the H&B team wanted to settle the issue unequivocally. In a competitive industry where perception matters, misinformation can have financial consequences.

Charles suggested they look into being certified Australian made. "With that logo on your product, there is no question where it's made," Charles says. He and Ian pitched the idea to EVP Sales, Marketing, & GM Australia, Craig Mayman, who quickly agreed to finance the certification.

To be certified, the H&B team had to prove that their products' most substantial manufacturing transformations occur in Australia. "The certification process was pretty intense," Charles says. "We had to prove where our raw material comes from, where it gets heat treated, what coatings we use, who our subcontractor is, where they're located, and what changes we make to the product."

Because of COVID-19, the team had to earn certification remotely. "It was a real team effort. Everybody chipped in," says Ian. Ludovic Boi, Daniel Hurst, and other members of Schramm Australia played an important role, compiling video, photographic, and written evidence that they digitally forwarded to the AMCL.

The team's hard work paid off. Schramm AirDrill H&B are now certified Australian Made and can renew the certification annually. The certification arrives as the global drilling market begins gaining momentum after the COVID-19 downturn.

The H&B team are excited that sales and manufacturing are ramping up. "We're busier than ever at the moment," Charles says. "The future for AirDrill H&B looks very bright."

Where Old Machines Never Die: Top 5 Vintage Equipment Stories of 2024

Stories about vintage construction equipment and their collectors continued to be popular in 2024 for Equipment World audiences.

Among the stories was a 1962 "Sugar Baby," a Cat D6 converted from tracks to wheels for hauling sugar cane in Florida.

A collector helped track down and acquire a 1954 Allis-Chalmers HD-15 dozer that his grandfather used to start an excavation business in 1960 and hadn't seen in over 50 years. We also found a man who has the largest collection of Struck mini dozers.

We're glad to see readers enjoy these stories as much as we do in telling them. Many of the stories have companion videos showing the machines in action.

We've listed the top five vintage-equipment stories of 2024 below, along with links on how you can access them if you want to read – and watch – more. You can also check out our Vintage Equipment section on equipmentworld.com to see our full collection.

1. His Rare Traxcavators are for Show – His Vintage Cats are for Work

Bill Deutsch has a rare collection of crawler tractors equipped with the Trackson Traxcavator, an invention that led to Caterpillar developing the modern-day track loader.

He even has what could be the only one of its kind left, a 1930s prototype of the Trackson Traxcavator attachment on an International I-30 tractor, called the International TracTracTor.

Another unusual aspect to Deutsch's vintage-equipment collection is that he uses a lot of the machines in his operations as the owner of Deutsch Excavating in Northfield, Minnesota. That includes 1950s-era Cat cable dozers, scrapers and motor grader.

2. Finding Grandpa's Dozer: The Long-Lost 1954 Allis-Chalmers HD-15

John Engstrom bought a 1954 Allis-Chalmers HD-15 dozer in 1960 to start an excavation business. He ran the HD-15 for five years and sold it, but he often thought about the old dozer that helped him launch a successful company and become an important fixture in Hastings, Minnesota.

Fast forward to 2019 when his grandson Jeff Engstrom was at an antique tractor show. A man approached saying he knew the whereabouts of an old Allis-Chalmers dozer with his grandfather's company name on it.

The old, rusted dozer left to die in the woods turned out to be John Engstrom's long-lost HD-15.

3. Stuck on Struck Mini Dozers – Big Collection Focuses on Small Machines

Since 1967, readers of Popular Mechanics magazine have been intrigued by one of its regular back-pages ads.

It promises the backyard do-it-yourselfers they can do the work of a contractor at a fraction of the cost with the Struck Mini Dozer. The DIY theme extends even further as the dozers come by mail-order kit that customers assemble.

Jeff Malmberg of Grand Rapids, Michigan, first saw the ads about 30 years ago and eventually found himself becoming the largest collector of pre-1990s Struck machines. Not only has the small company based in Cedarburg, Wisconsin, produced mini dozers, but all kinds of mini Jeeps, including amphibious and articulated models, tractors and even snowmobiles.

Malmberg has most all of them – as well as many that never went into production.

4. Scrappy Collector Rescues, Restores Vintage Equipment in YouTube Videos

Sam Descutner has been operating vintage cable shovels since he was 8 years old.

In eighth grade, he began his first restoration project, a 1960 Bucyrus Erie 22-B, which he finished at age 15.

Now at 31, the mechanical engineer in McDonald, Pennsylvania, still maintains his love of vintage construction equipment as a hobby. He especially likes the friction cable cranes, the predecessors to the hydraulic excavator.

As he goes in search of rundown machinery to rescue, he videos his travels and restoration projects. His YouTube channel "Scrappy Industries" has more than 60,000 followers. Some of his videos have over 500,000 views.

His followers also help him on his searches.

5. What's a "Sugar Baby" Cat? – Collector Reveals 1962 Wheeled D6 (Video)

As an avid Caterpillar collector, Erik Christenbury had the "Sugar Baby" Cat on his wish list.

He had heard about the D6s that got their nickname after U.S. Sugar had converted them from tracks to rubber tires in the 1950s and 1960s. The company used those "DW6s" for hauling wagons filled with 30 tons of sugar cane from the fields to the company's sugar mills.

When one of the converted D6s popped up on eBay, Christenbury thought he'd finally scored. Another bidder, however, captured the prize.

In 2011, he got a second chance.

A friend who owns a scrapyard in southwest Virginia called to say one just showed up and asked if he were interested. He drove from his home in Liberty, North Carolina, to have a look.

"I didn't realize he had two of them," Christenbury recalls. "And before our conversation ended, I bought both of them."

Vermeer Rolls Out D24 HDD for Urban Utility Installation

Vermeer is retiring its D23x30 S3 horizontal directional drill and rolling out the new D24.

Following suit with other manufacturers, Vermeer has simplified the model nomenclature of its machines. The "24" in D24 represents the drill's 24,000-pound size class and 24,700 pounds of maximum peak thrust and pullback.

Powered by a 100-horsepower Cat 3.6L Tier 4 Final diesel engine, the compact yet powerful D24 is designed to install utilities — including fiber, power cables and water infrastructure — in congested urban areas.

It has a continuous thrust and pullback of 22,000 pounds, 3,080 foot-pounds of rotational torque and a 45-gallon-per-minute mud pump. The drill also boasts a low operator ear noise level of 88 decibels.

Vermeer has equipped the machine with premium hydraulic components — typically found in larger pipeline equipment — to help protect the hydraulic circuit and ensure consistent performance across drilling conditions.

Operators can choose between 400 feet or 480 feet of 2.375-inch Firestick drill rod. An automated rod exchange system completes the entire rod changeout sequence with the push of a button, eliminating up to 19 manual steps. This reduces wear on components and the risk of operator error, Vermeer says.

The D24's stakedowns feature tiered shark teeth and a rotation speed of up to 60 rpm — nearly triple that of its predecessors— which reduces setup time, especially in harder soils, allowing crews to begin drilling faster. The carriage speed is 181 feet per minute and rotational speed is 198 rpm. It has a 3.3-mile-per-hour tracking speed.

The redesigned vise system features sliding open-side vises for easy cleaning and clear joint visibility.

If an issue occurs, operators can quickly troubleshoot using the drill's advanced onboard diagnostics system, accessible via the machine's touchscreen display. Detailed information and data from the machine can be passed along to the dealer if additional support is needed.

Epiroc to showcase SmartROC D65 battery-electric at MINExpo

Epiroc will showcase a demonstrator of the first ever Down-The-Hole SmartROC D65 battery-electric drill rig at the MINExpo exhibition in Las Vegas, September 24-26. This innovative surface drill rig will play an important role in the shift towards a green transition and zero emission drilling in surface mines.

"We are very excited to showcase this rig at this year´s MINExpo. The SmartROC D65 BE is a milestone for us and for surface drilling around the world. The fact that we are removing tail pipe emissions from the drilling process is an important step towards a better environment. This accomplishment also shows that Epiroc has a vital role to play in making our industry more sustainable", says Martin Johansson, Acting Vice President Marketing, Epiroc Surface division.

The SmartROC D65 BE demonstrator is based on the well-proven SmartROC D65 surface drill rig. In combination with invaluable experience gained from the development of Epiroc underground battery rigs, this new rig is designed to enhance the environmental standards of mining and larger quarry sites. Besides the low emissions, this rig provides the same range of on-board smart features, and delivers high safety, reliability, and performance – in a quieter working environment.

"We have seen a demand in the mining business for greener solution – and with SmartROC D65 BE we meet those demands, says Mattias Hjerpe, Global Product Manager, Epiroc Surface division.

The leading service provider Capital Limited has been a close partner during the testing phase. The SmartROC D65 BE demonstrator on the stand will also go directly to Capital Limited for field trial after the exhibition. Capital Limited points out that SmartROC D65 BE will be an important asset in their future transition journey towards reducing emission and decarbonization.

"We are excited to be partnering with Epiroc to field test this innovative electric drill rig technology that will help drive our industry towards more sustainable operations. To be at the forefront of the transformation towards emissions-free surface drilling supports our company's overarching commitment to decarbonisation, as well as providing value for our customers", says Peter Stokes, Chief Executive Officer Capital Limited.

The SmartROC D65 BE demonstrator is equipped with a battery which drives the tramming motors and an electric cable to hook it up to provide power for drilling.

"The SmartROC D65 BE surface drill rig is fitted with the same type of well-proven batteries and subcomponents as in other Epiroc battery solutions. This streamlines spare parts handling and service for customers with several different operations", says Mattias Hjerpe.

SmartROC D65 BE will play an important role in Epiroc´s sustainability goals for 2030

Epiroc's battery-electric solutions are attracting strong interest from the market. Customer benefits include emissions-free operations, lower noise pollution and vibration, and higher productivity. The rig plays a vital role in Epiroc's ambitious sustainability goals for 2030, which include halving the CO2 emissions in operations and from sold products when compared to 2019 levels. In 2021, the goals were validated by the Science Backed Targets initiative as being in line with keeping global warming at a maximum 1.5° C, consistent with the latest climate science and the goal of the Paris Climate Agreement. We are determined to offer our full range of underground equipment in an emission-free version by 2025, and for the surface equipment we aim to offer the same by 2030.

Our Products

DTH Hammers (2-12" Diameter) | DTH Button Bits (2-20" Diameter)
DTH Odex Drilling System (41/5-12") | Frictional Welded Drill Rods (Dia. 73, 76, 89, 115, 127mm)
All Types of Conversion Adaptors (Male & Female)

NETZSCH Highlights its Movable Dewatering Pump Skids

NETZSCH to highlight movable dewatering pump skids and other challenging mining applications at SME MINEXCHANGE Expo 2025

NETZSCH Pumps USA will be showcasing its line of complex fluid handling solutions for mining applications at the 2025 SME MINEXCHANGE Expo, February 23–26, 2025, in Denver, CO. Stop by booth 1731 to see the NEMO® Progressing Cavity Pump, TORNADO® T2 Rotary Lobe Pump, PERIPRO® Peristaltic Pumps, NOTOS® Multi Screw Pumps, and Mine Dewatering Skids, ideal for underground mines that require a small and compact movable unit to address their dewatering challenges.

The NEMO® progressing cavity pump is known for its ability to efficiently transfer viscous mineral slurries without being affected by fluctuations in pressure or solids content. NEMO® pumps are also the gentlest and safest choice for high performance pumping of emulsified/liquid explosives.

Another option for mining applications is the TORNADO® T2 Rotary Lobe Pump, a self-priming, valve-less pump that offers maximum operational performance, high reliability and durability, ease of maintenance, and a low total life cycle cost. With a revolutionary design that has been recently reengineered to maximize uptime, the TORNADO® T2 pump features metal lobes running inside a metal housing with an elastomer liner.

The NOTOS® multi screw pumps ensure reliability of the ball mills and SAG mills, where consistent and continuous lubrication is essential. NOTOS® pumps are the ideal solution to supply the injection unit as well as handle the lubricant circulation operation.

PERIPRO® Peristaltic Pumps have a heavy-duty construction for demanding applications, with large, easy-to-maintain rollers for longer service life. These pumps are ideal for complex fluids, such as abrasive, corrosive, viscous, and delicate products. Ultimately, this pump design provides energy savings up to 30% and requires 90% less lubricant when compared to other peristaltic pumps using shoe technology.

NETZSCH pumps are available a wide range of flow and pressure capabilities. These pump types as well as the dewatering skid tank can be constructed from carbon steel, stainless steel, galvanized steel, and Halar/rubber-lined steel, depending on application needs. All NETZSCH mining pump solutions are rugged, reliable and easy to maintain.

MAKE IN INDIA

Boomer S2 – part of an autonomous future

As limestone and dolomite producer Daesung MDI expands its automatic operations, the Boomer S2* face drill rig from Epiroc is a vital cog in the machinery.

Founded in the 1960s specializing in resource development, Daesung MDI has been a steady supplier of quality limestone and dolomite in South Korea, contributing to the development of the domestic industry. The company has been using Epiroc equipment since the mid-1990s, including several models of the Boomer face drill rig.

The Daesung MDI-operated Samcheok mine – located in the northeastern part of South Korea, close to the Sea of Japan – now uses the Boomer S2. This electric rig is the first of its model to be used in South Korea, and it's fast becoming the company's rig of choice.

"Epiroc equipment has been a favorite of Daesung MDI. As for the Boomer S2, its features and size perfectly fit our shafts," says Seung-Gyu Lim, Daesung MDI Deputy Director for production.

Convenient size aside, the main reason that Daesung MDI loves the Boomer S2 is that the rig is jam-packed with automation features. As operator Hong-Kwan Kim grabs the joysticks of the Boomer S2 in an underground shaft in the Samcheok mine, he looks at a monitor showing the coordinates of the scanned wall that he is about to drill. It almost looks like he's preparing to play a video game.

"The computer program scans the wall, and the perforation parameters are shown very clearly," Hong-Kwan Kim says. "I get to know everything I need to know and can then proceed with automatic drilling or drill manually. It's really convenient."

This work is carried out with the help of ABC (Advanced Boom Control) Total, an automation feature that allows drilling to be performed according to digital drill plans, enabling drilling of a sequence of holes (a full round) automatically. This feature allows the operator to control more than one boom simultaneously, resulting in repeatability, time savings, and the possibility to drill during shift changes.

"The efficiency of the work we're talking about lies in the pre-fracture phase of drilling with the jumbo drill," says Chang-Oh Kim, Daesung MDI's managing director. "Thanks to ABC Total, the operator can see what is drilled in three-dimension so, yes, the effectiveness of drilling has greatly improved. Compared to equipment without ABC Total, the drilling time is reduced by approximately 10 minutes. With the Boomer S2, we produce 10 to 20 percent more ore than with other equipment with no automation features."

The Boomer S2 penetrates the mine wall about 3.9 meters at a time, and the ensuing blast results in approximately 800 metric tons of limestone. The Daesung MDI Samcheok site typically blasts four times a day, producing about 3 200 metric tons of limestone. By using automation, blasting efficiency at the Samcheok mine has increased by about 5–10%, which has also reduced the consumption of rock tools by approximately 5–10%.

Another automation feature of the Boomer S2 rigs used at the Samcheok mine is Epiroc's new Rig Control System (RCS 5), which makes full automation easier and more productive. The system provides a number of safety and interlock features, as well as a foundation to add new functionality later without a major rebuild of the machine. At this point, two automated drill rigs are in operation at the Samcheok mine, accounting for about 33% of the entire operation, but Daesung MDI plans to invest further.

"In the future, we will continue to purchase more automation equipment and increase the ratio, which will further reduce production costs"

Chang-Oh Kim, Daesung MDI's managing director

Epiroc DTH 5 hammers

We are launching the new DTH 5 hammers – Perfect your drilling game

We are proud to announce the launch of the Epiroc DTH 5 hammers, a revolutionary new range designed to maximize efficiency, boost profitability, and redefine versatility in drilling operations.

The Epiroc DTH 5 hammers deliver an exceptional rate of penetration (ROP) and longer service life, setting a new standard for performance and cost-effectiveness. Designed to excel in all drilling assignments, these hammers are the perfect choice for companies looking to expand their capabilities, take on new lucrative projects, and increase their competitiveness.

Key benefits:

· Unmatched versatility: Ideal for high- and low-impact energy scenarios, the Epiroc DTH 5 hammers tackle any rock formation and feature many configurations in one system.

· Superior performance: Boost productivity with fewer interruptions and quicker task changes.

· Eco-friendly impact: Reduced manufacturing and transportation needs contribute to lower CO_2 emissions and sustainability goals.

"We've combined the best of our hard-striking QL and robust COP Gold hammers to create a product that not only performs but transforms operations. The Epiroc DTH 5 hammers truly pack a serious punch, offering our customers the tools they need to take their businesses to the next level."

Delaney Erickson ,Global Product Manager DTH, Epiroc Tools division.

Maximize your bottom line

The DTH 5 hammers allow operators to drill more meters per shift, rebuild hammers up to three times with exclusive E-Kits from Epiroc, and enjoy a lower Total Cost of Ownership (TCO). With their ability to fit all leading brands of compressors and rigs, they represent a unique opportunity for growth and cost savings.

Go full Epiroc

From rig to bit, the DTH 5 hammers are designed to optimize every part of your operation, delivering maximum efficiency, profitability, and reliability.
